Article about Canary Wharf

Canary Wharf, once a neglected area of marshland and disused docklands, has become a leading global financial centre since the 1990s. Originally a "back office" for major financial institutions, it now houses the European headquarters of major corporations such as Barclays, HSBC, and JP Morgan, rivaling the City of London's financial district, the "Square Mile."

The development of the Elizabeth Line (formerly known as Crossrail), nearing completion, is set to further boost Canary Wharf's appeal by adding 10% to London Underground's capacity and significantly shortening travel times across the city. This follows earlier infrastructure projects like the Docklands Light Railway (DLR) and the Jubilee Line extension, which spurred growth in the 1990s and 2000s.

The new line has made Canary Wharf even more attractive for developments like Wood Wharf (a housing project in Canary Wharf) that brings 4,000 new homes, Europe's largest bio lab, and a "green spine" created in partnership with the Eden Project.
