READ THESE INSTRUCTIONS

The Insert contains all the Resources referred to in the questions.

This document consists of **9** printed pages

Resource 1 for Question 1

Profile of participants

	Number of participants (Total: 56)
Gender	Women: 53 Men: 3
Marital Status	Married: 41 Single: 3 Widowed: 12
Diagnosed disease	Yes: 44 No: 12
Use assisted aid	Yes: 32 No: 24
Self-rated fitness	Poor: 5 Quite Good: 20 Good: 22 Very Good: 9

Resource 2 for Question 1

Survey Recording Sheet

Gender: Male/Female
Age:
Marital status: Married/Single/Widowed
Diagnosed disease: Yes/No
Use assisted aid: Yes/No

Self-rated fitness (Please tick):
□ Poor
□ Quite Good
□ Good
□ Very Good

1) What is the most important for you to age well? (You can tick ONLY 1 option):
□ Sense of well-being
□ Having good physical health
□ Preserving good mental health

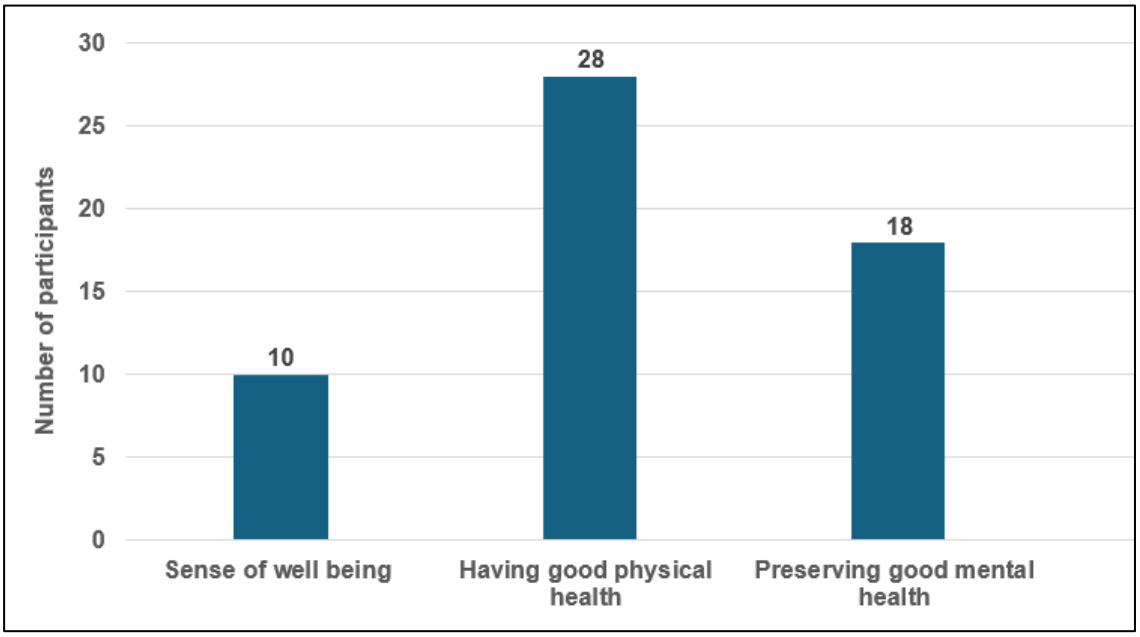

2) Who can help you to age well? (You can tick ONLY 1 option):
□ Family and friends
□ Medical personnel (e.g. family doctor)
□ Voluntary Welfare Organisations (e.g. Senior Activity Centres)
□ Others. Please state below:
_____
_____

3) What are some obstacles you faced to age well?
_____
_____

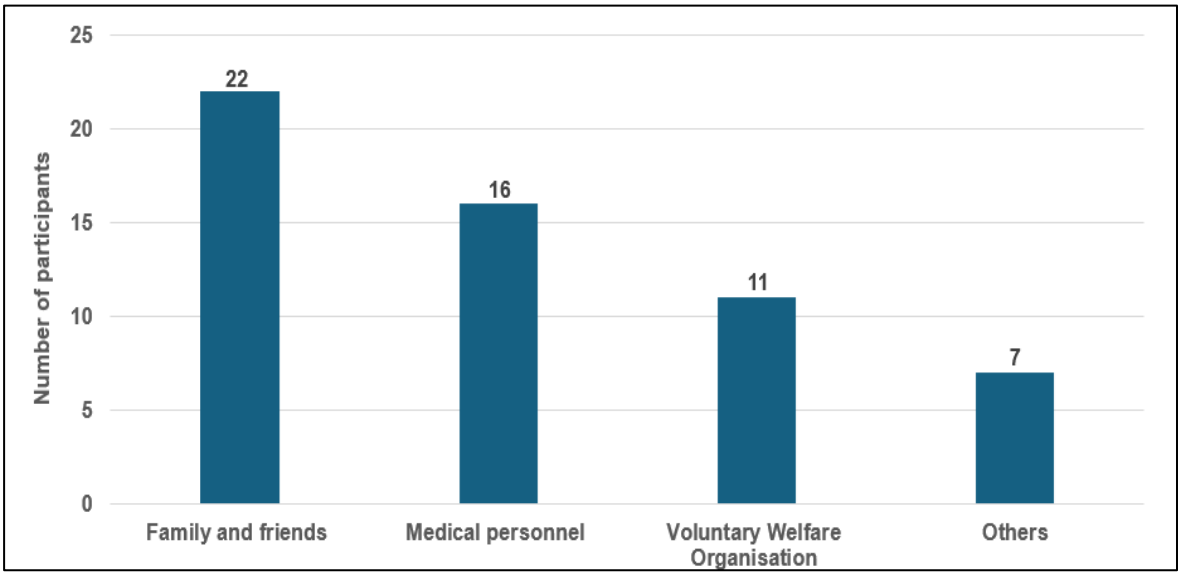

Resource 3 for Question 1

Survey results

Question 1: What is the most important for you to age well?

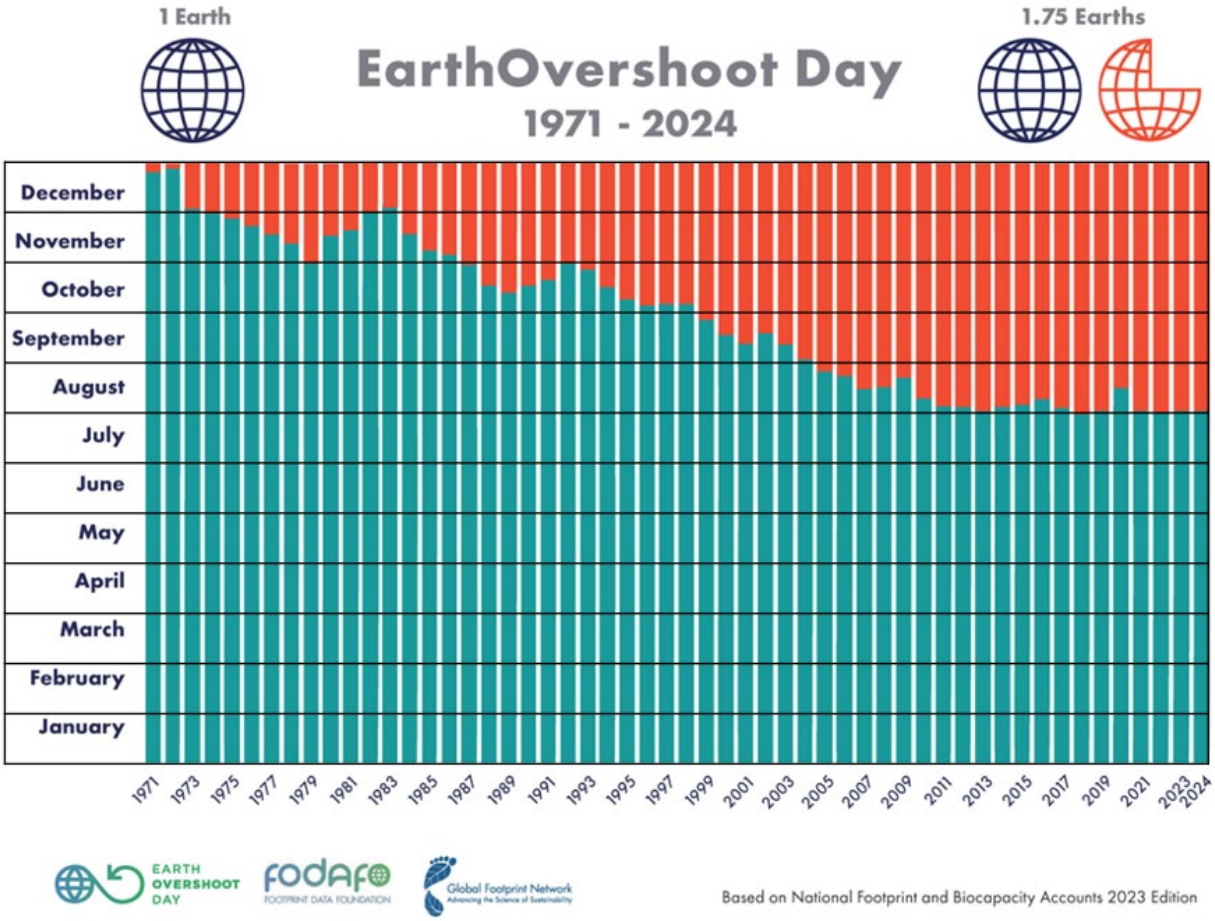

Question 2: Who can help you to age well?

Resource 4 for Question 2

Changes in the Earth Overshoot Day from 1971 to 2024

	Days living over what earth can regenerate in that year
	Days before overshoot is reached

Earth Overshoot Day is the date when humanity's use of natural resources in that year exceeds what the earth can regenerate in that year. It is computed by dividing the planet's biocapacity (the amount of ecological resources Earth is able to generate that year), by humanity's Ecological Footprint, and multiplying by 365, the number of days in a year.

In 1971, the Earth Overshoot Day arrived on 25 December. Yet in 2024, it arrived on 1 August.

Resource 5 for Question 2

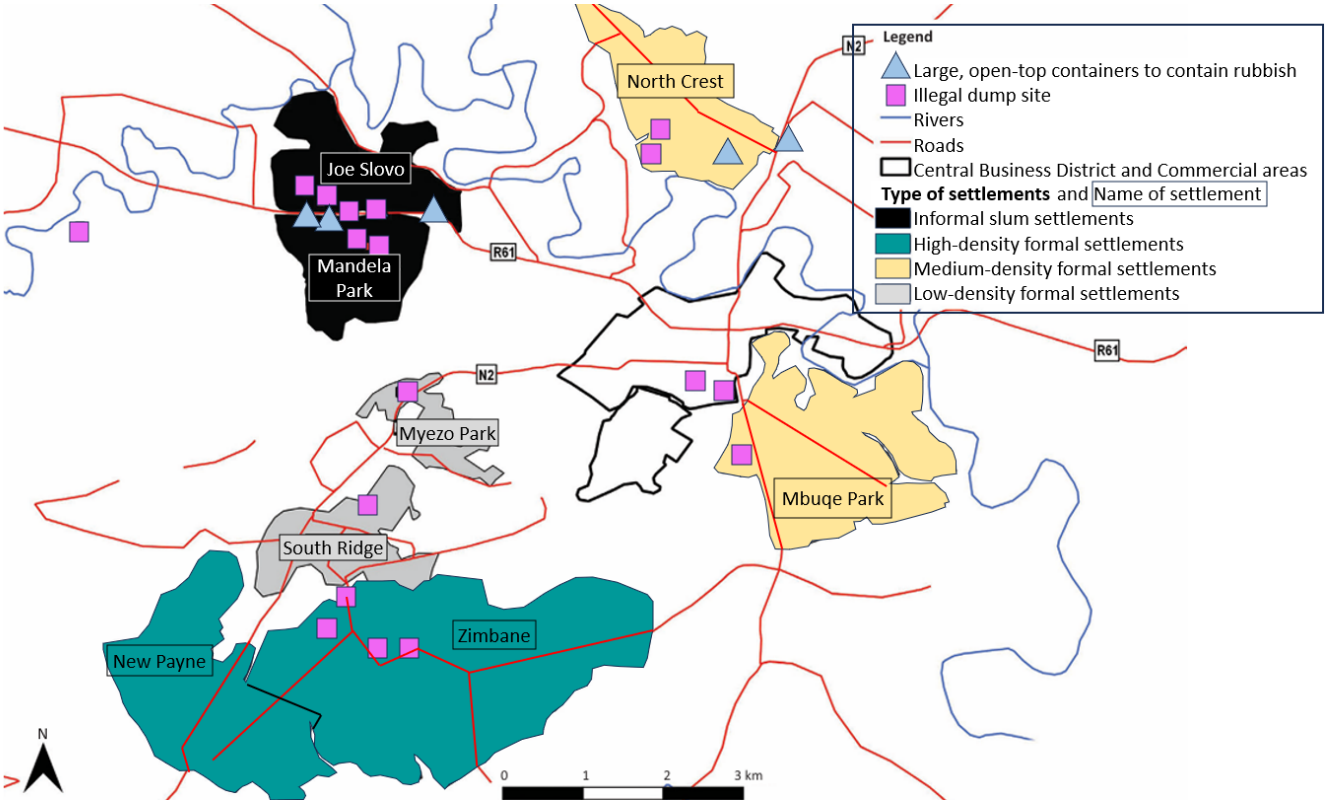

Waste disposed by types of settlements in Mthatha, South Africa

Waste types	Informal slum settlements (%)	High-density residential settlements (%)	Middle-density settlements (%)	Low-density residential settlements (%)	All households (%)
Food waste	46.9	38.7	65.6	70.5	55.2
Plastic	14.1	12.9	9.8	3.3	10.1
Papers	14.1	12.9	11.5	4.9	10.9
Tins and metals	6.3	25.8	4.9	1.6	9.7
Glass	0.0	3.2	1.6	8.2	3.2
Disposable nappies	18.8	6.5	6.6	11.5	10.9

Note: South Africa has a high human development index of 0.71 and 67% of its people live in urban areas. It has the highest Gross Domestic Product amongst African countries.

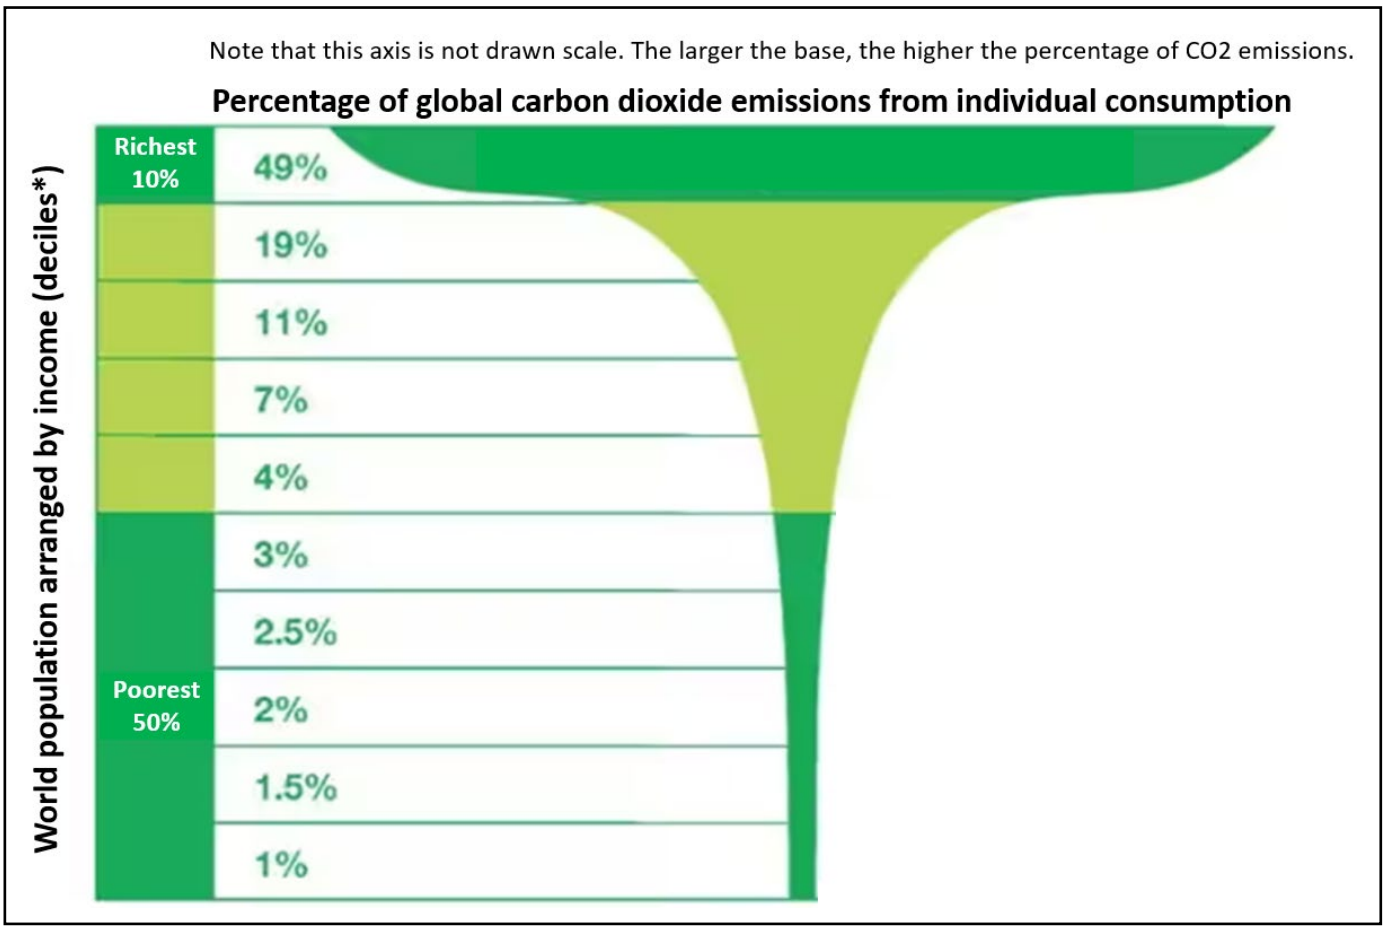

Resource 6 for Question 2

Locations of different types of settlements in Mthatha

Resource 7 for Question 3

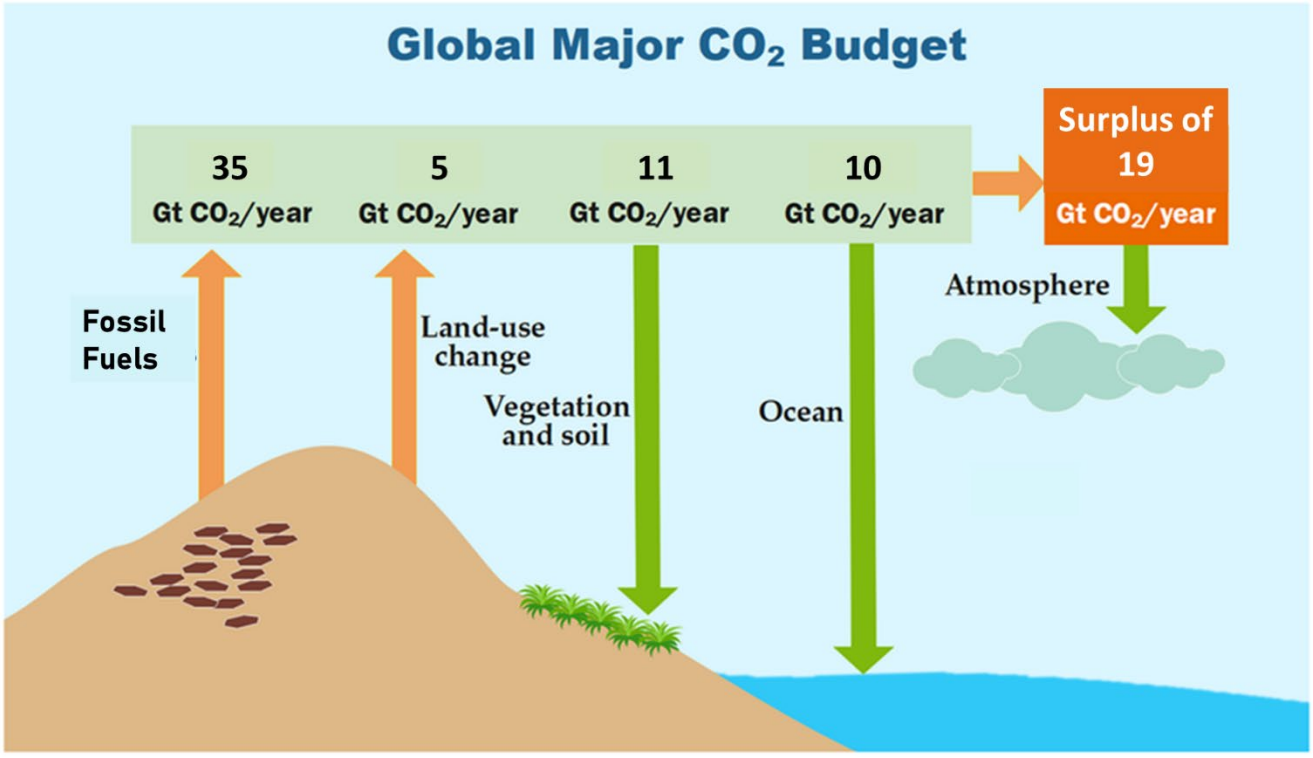

Percentage of carbon dioxide emissions from individual consumption by income groups

*Decile = 1 decile equates to 10% of the population.

Resource 8 for Question 3

Changes to the global carbon cycle from 2011 to 2020

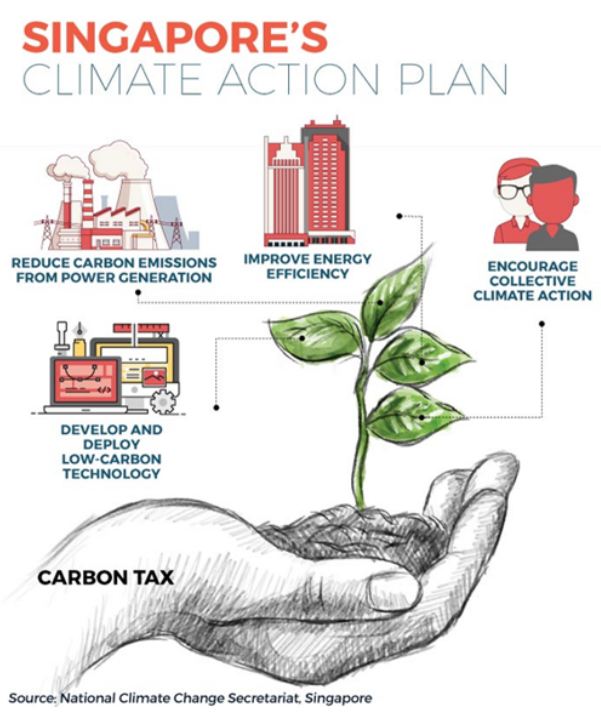

Gt CO_2/ year = gigatonnes of carbon dioxide per year

Legend	
	Release from carbon stores
	Uptake by carbon stores

Resource 9 for Question 3

A type of response to climate change

How a carbon tax works:

Singapore introduced a carbon tax in 2019, the first in country in Southeast Asia to do so. It is applied to facilities that directly emit at least 25,000 tCO2e of greenhouse gas (GHG) emissions per year.

Businesses can choose to reduce emissions by improving their energy efficiency or pay a carbon tax.

It will be progressively increased to reach S$50 to S$80 per tonne of emissions by 2030, up from the S$5 per tonne in 2019.

Carbon tax revenue will help to fund measures by industry to reduce emissions and provide appropriate measures to ease the transition.

tCO2e = tonnes of carbon dioxide equiavlent
