Paper 2 **26 September 2025**

INSERT **3 hours**

READ THESE INSTRUCTIONS FIRST

This Insert contains all the Resources referred to in the questions.

Resource 1 for Question 1

Map of the Kallang River flowing through Bishan-Ang Mo Kio Park

Resource 2 for Question 1

Channel characteristics measured by the students at different points of the Kallang River

Channel Characteristics	A	B	C	D	E
Width (m)	2.0	4.0	7.3	8.1	15.3
Depth (m)	0.1	0.52	0.6	1.2	1.9
Hydraulic Radius*	0.09	0.41	0.51	0.93	1.52

**Hydraulic radius is calculated by dividing the cross-sectional area of a river by its wetted perimeter. It is a proxy measure of the efficiency of a river channel. The larger the hydraulic radius, the more efficient the channel is at moving water.*

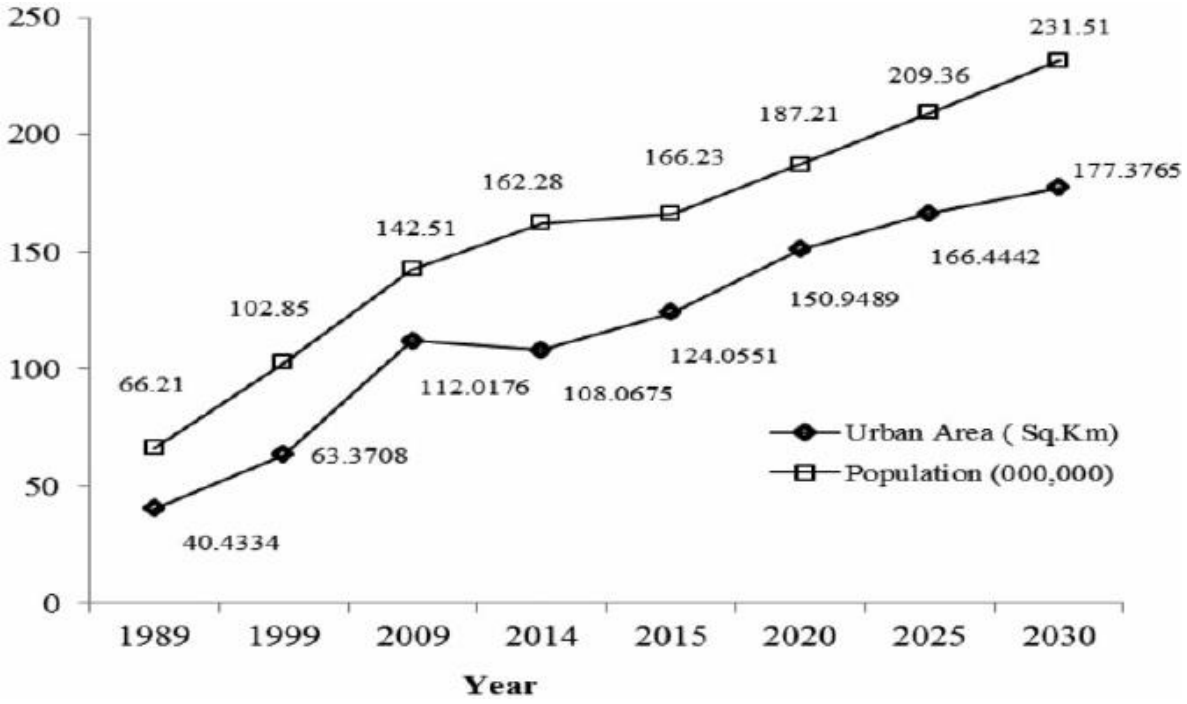

Resource 3 for Question 1

Data collected from the observation study

TIME	HUMAN ACTIVITY	NUMBER OF PEOPLE
8.00am	Jogging	Many people
8.30am	Playing in the river	A few young children and adults
9.00am	Flying kite	Some youngsters

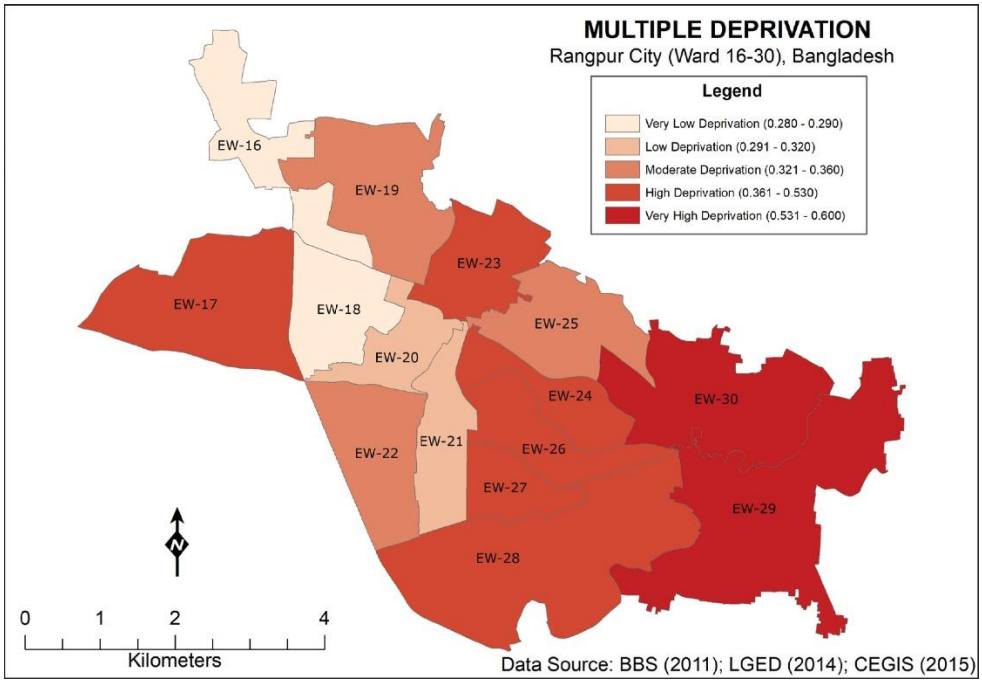

Resource 5 for Question 2

Trends in the urban area and population of Dhaka, Bangladesh, 1989 – 2030

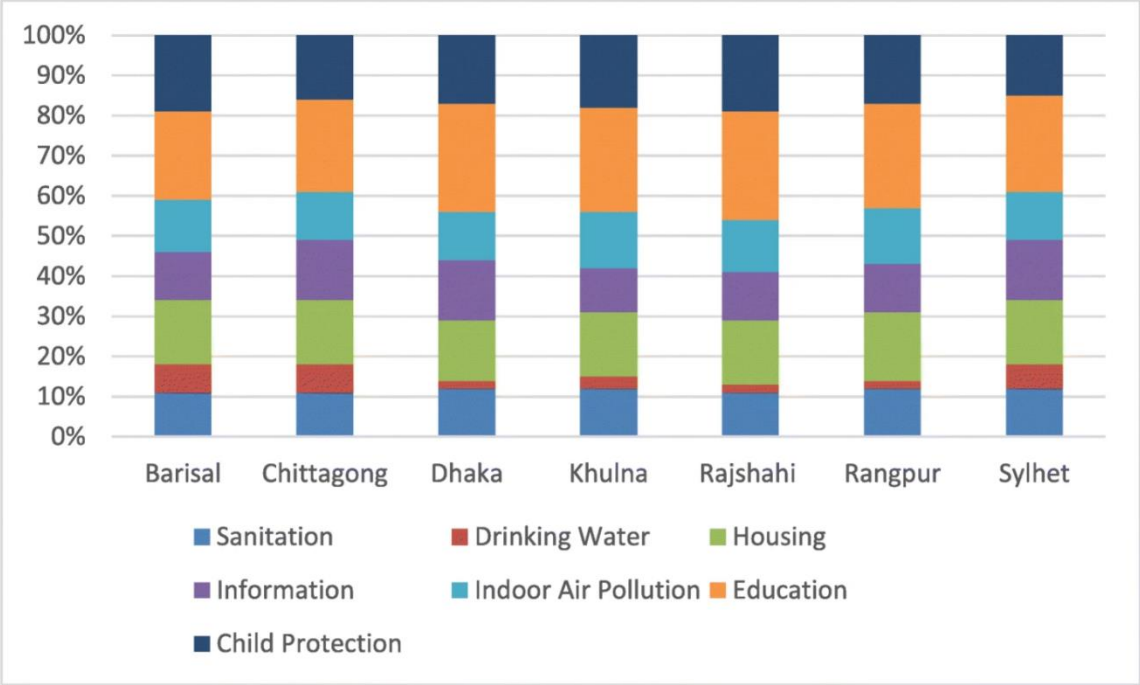

Resource 6 for Question 2

Distribution of multiple deprivation in Rangpur City, Bangladesh

Resource 7 for Question 2

Contribution of indicators to overall poverty in Bangladeshi cities among children aged 6 to 17 years

Resource 8 for Question 2

An excerpt from a BBC article dated 1 July 2015

In the centre of Dhaka, a few streets away from high rise office blocks and the penthouses of the wealthy, lies the city's biggest slum. Today, Korail is estimated to have 200 000 residents, many of them living in small shacks with bamboo frames and corrugated tin roofs.

However, upon walking a little further, a different perception of life in Korail started to take hold. Many of the paths had been concreted, there was a mosque and a school built of brick, and shops and stalls serving the local residents.

Some of these improvements are due to the Urban Partnership for Poverty Reduction which began in 2010, putting the decision-making power into the hands of the people who live here. Groups forming community development communities elect members to clusters, which are a point of contact for outside development assistance. The clusters, which are asked to identify priorities for improvement, are dominated by women.

In this way, the people of Korail have asked for – and built – footpaths and drains, and negotiated with the local authority for water supplies. But they are proudest of their new latrines and the transformation of a muddy piece of land used for open defecation into a block of six toilets.

Beyond physical improvements to the slums, the clusters also have a role in identifying those among them who would benefit from loans or grants, or help with new skills so they can get a job.

And the empowerment goes beyond the women's contact with aid agencies and NGOs. Shoma told me her position representing the community has given her the courage to go to the police with a complaint about a pair of neighbourhood thugs.
