Paper 1

1 SEPT 2025

Additional Materials:
Insert

3 Hours

READ THESE INSTRUCTIONS FIRST

Write your name and class in the spaces at the top of this page.
Write in dark blue or black pen.
You may use a pencil for any diagrams or graphs.
Do not use staples, paper clips, highlighters, glue or correction fluid/tape.

Answer Question 1 in **Section A**.
Answer both questions in **Section B**.
Answer **two** questions in **Section C**.

The use of an approved scientific calculator is expected, where appropriate.

The number of marks is given in brackets [ ] at the end of each question or part question.

At the end of the examination, fasten all your work securely together.

Section A

Cluster 2: Fieldwork

1 A group of 6 Junior College students in Singapore wanted to investigate the needs of elderly with dementia in Singapore. They decided on the following hypothesis:

Singapore is able to manage elderly dementia.

They decided to conduct their investigations in Yishun and Punggol. Yishun's population is made up of 20.2% of residents aged 60 and above while Punggol has 11.4% of residents aged 60 and above.

The students conducted their investigations on a Monday in Yishun and on a Wednesday in Punggol, between 10am and 12noon. They used a survey questionnaire to collect primary data for their investigation. The students approached 20 people in Yishun and 30 people in Punggol out of convenience. The survey respondents were from a range of age groups and professions. The students also took some photographs and videos of the residents going about their everyday lives during their investigation.

Resource 1A shows the locations of the students' investigation in Yishun. Resource 1B shows the locations of the students' investigation in Punggol. Resource 2 shows the profiles and number of survey respondents in Yishun and Punggol. Resource 3 shows the data collected for selected survey questions.

(a) Explain two ways the students can improve on their hypothesis. [4]

(b) Explain how the students could minimise potential impacts of their investigation. [4]

(c) Suggest how the students could mitigate the risks of their investigation. [3]

(d) With reference to Resource 2, suggest how the students could have obtained a more representative sample of the residents in Yishun and Punggol. [4]

(e) With reference to Resource 3, represent the data using an appropriate data representation method. [5]

(f) The students concluded that their hypothesis is valid. Evaluate the validity of their conclusion. [10]

Section B

Cluster 1: Sustainable Future and Climate Change

Answer **both** questions.

2 Resource 4 shows the Slum Severity Index (SSI) in India, a household-level measure that captures multiple housing deprivations in a single index. It includes three additional housing amenities, namely the availability of kitchens and clean fuel, electricity, and bathrooms. These three additional housing amenities are not currently part of the UN-Habitat definition. Resource 5 shows a photograph of a slum in Mumbai, India. Resource 6 shows a slum improvement project in Mumbai, India.

(a) Using Resource 4, describe the pattern of Average Slum Severity Index (SSI) in India. [4]

(b) Suggest two reasons why slums can develop in urban areas of a country like India. [4]

(c) With reference to Resource 4 and Resource 5, explain the impact of multiple deprivations experienced by slum dwellers on sustainable urban development in cities like Mumbai, India. [6]

(d) With reference to Resource 5 and Resource 6, account for the limited success of strategies used to improve the lives of slum dwellers. [4]

(e) Explain two factors affecting liveability in urban areas. [4]

3 Resource 7 shows the Greenland and Antarctic ice sheet mass balance change and contribution to global sea level from 1992 to 2020. Resource 8 shows the net greenhouse gas fluxes from forests between 2001 and 2019. Resource 9 shows the estimated impact on Gross Domestic Product (GDP) / Capita Growth due to climate change in 2100.

(a) Using Resource 7, describe the Greenland and Antarctic ice sheet mass balance change and contribution to global sea level from 1992 to 2020. [4]

(b) Explain how changes in ice sheets can influence temperature through feedback mechanisms. [4]

(c) With reference to Resource 8, explain how humans can influence the global carbon cycle. [4]

(d) Using Resource 9, account for the variations in impacts of contemporary climate change on places. [6]

(e) Explain two reasons why there might be uncertainty over present and future impacts of contemporary climate change. [4]

Section C

Cluster 1: Sustainable Future and Climate Change

Answer **two** questions.

4 "Recycling is the most effective waste management strategy available today."

Evaluate this statement. [13]

5 Evaluate the success of strategies used to address the issues faced by women living in the city. [13]

6 States are more responsible than firms and non-governmental organisations (NGOs) in responding to climate change."

Evaluate this statement. [13]
