ANDERSON SERANGOON JUNIOR COLLEGE

JC2 H1 Geography Preliminary Exam (2026)

H1 GEOGRAPHY **8834/ 01**

19 August 2026

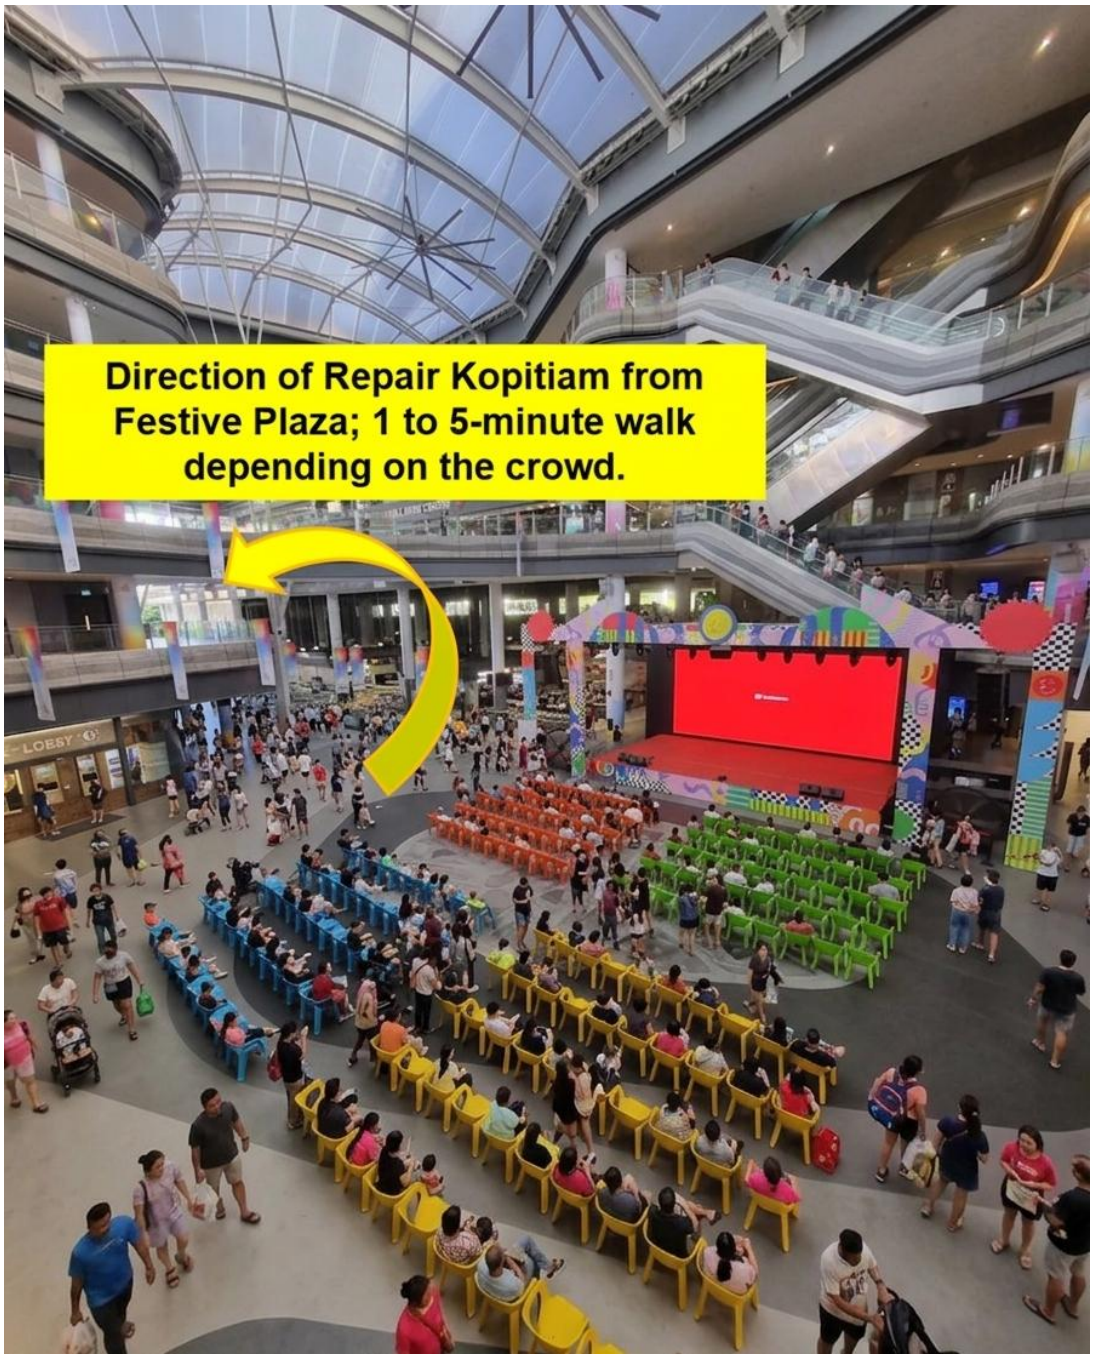

INSERT **3 hours**

READ THESE INSTRUCTIONS FIRST

The Insert contains all the Resources referred to in the questions.

Resource 1A for Question 1

Photograph of Festive Plaza at Our Tampines Hub, indicating the direction of Repair Kopitiam from Festive Plaza

Resource 1B for Question 1

Photographs of the Repair Kopitiam coaching stations near Festive Drive at Our Tampines Hub

Fieldwork Evidence B:
Volunteer coaches are in aprons

Fieldwork Evidence C:
Volunteer coaches are in aprons

Resource 2 for Question 1

Questionnaire survey for data collection

Section A: Profile of Respondent

1. Full Name: _____
2. Home Address: _____
3. Age: ☐ Below 21 ☐ 21–40 ☐ 41–60 ☐ Above 60
4. Gender: ☐ Male ☐ Female
5. Main reason for visiting Our Tampines Hub today:
   ☐ Library ☐ Sports Facilities ☐ Hawker Centre ☐ Shopping ☐ Others: _____

Section B: Awareness of Repair Kopitiam

Please indicate your level of agreement with the following statements on a scale of 1 to 5:
(1 = Strongly Disagree, 2 = Disagree, 3 = Neutral, 4 = Agree, 5 = Strongly Agree)

Statement	**1**	**2**	**3**	**4**	**5**
6. I am very aware of the Repair Kopitiam sessions held monthly at this hub.	☐	☐	☐	☐	☐
7. I know that Repair Kopitiam is located at Festive Drive.	☐	☐	☐	☐	☐
8. I understand how repairing items instead of throwing them away helps to mitigate climate change.	☐	☐	☐	☐	☐

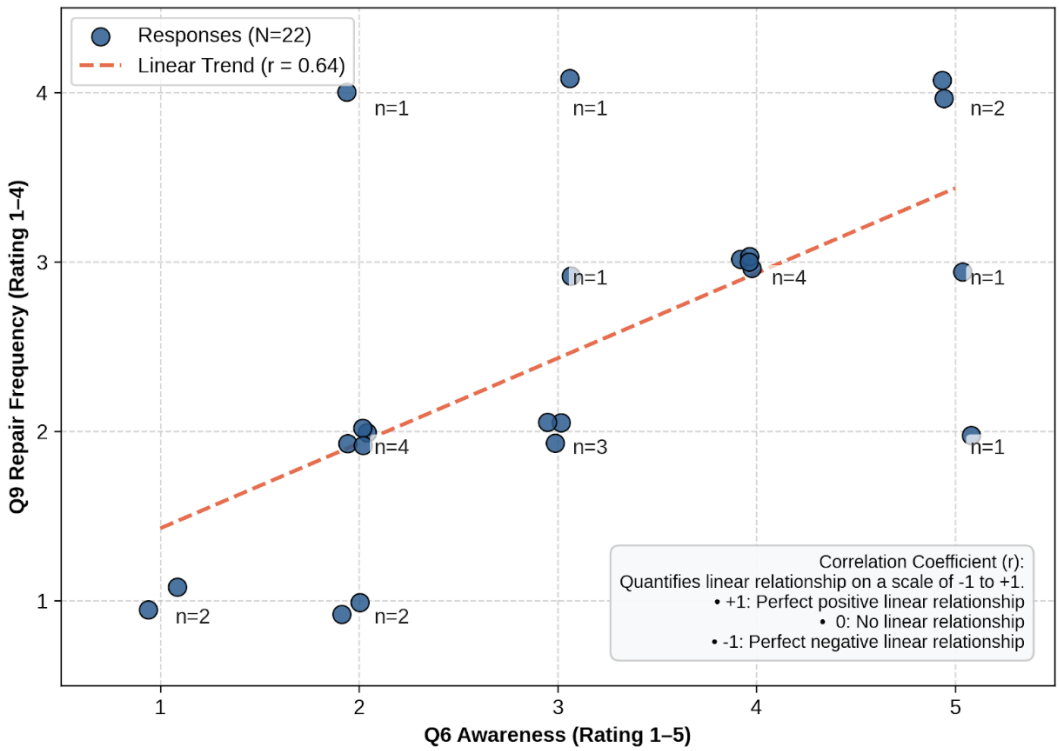

Section C: Repair Behaviors and Habits

9. How often do you choose to repair a broken household item (e.g., a fan or toaster) instead of buying a new one?
   ☐ Never ☐ Not often ☐ Often ☐ Very often
10. Given that Repair Kopitiam is a fantastic initiative that everyone should support to save the environment, how likely are you to bring an item for repair next month?
    ☐ Very likely ☐ Likely ☐ Unsure ☐ Unlikely ☐ Very unlikely
11. Which of the following items have you ever tried to fix yourself or at a workshop? (Select all that apply)
    ☐ Electrical appliances (e.g., iron, rice cooker) ☐ Clothing/Fabric items ☐ Toys or mechanical items
    ☐ None of the above

Thank you for your time!

Resource 3 for Question 1

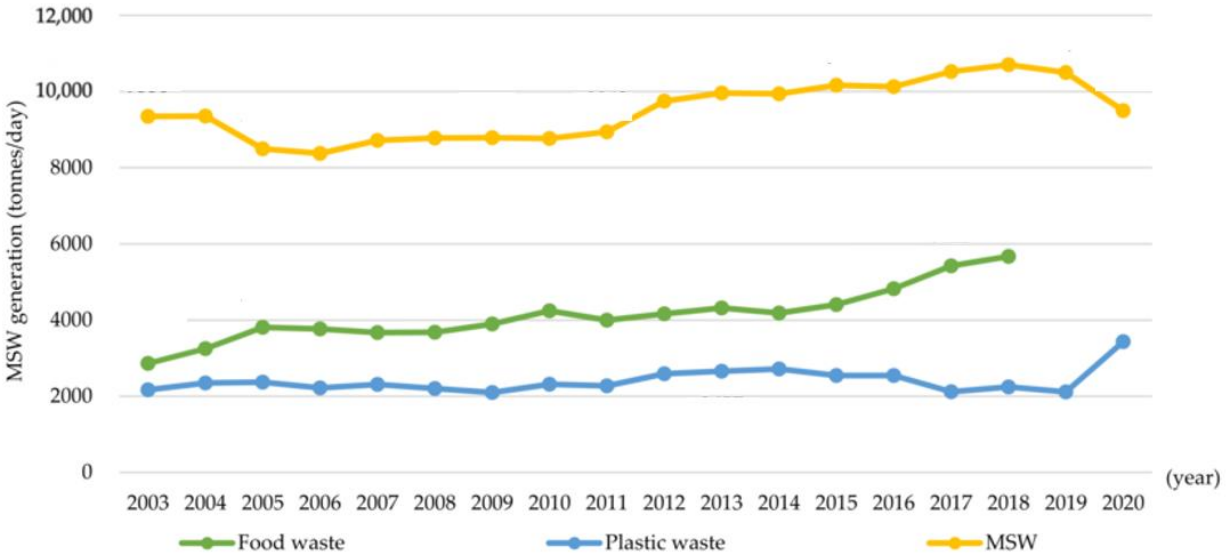

Scatter graph of responses to Question 6 and Question 9 of the questionnaire survey

Note: Count labels (n) have been applied so overlapping data points remain visible. The count labels add up to 22 responses.

Resource 4 for Question 2

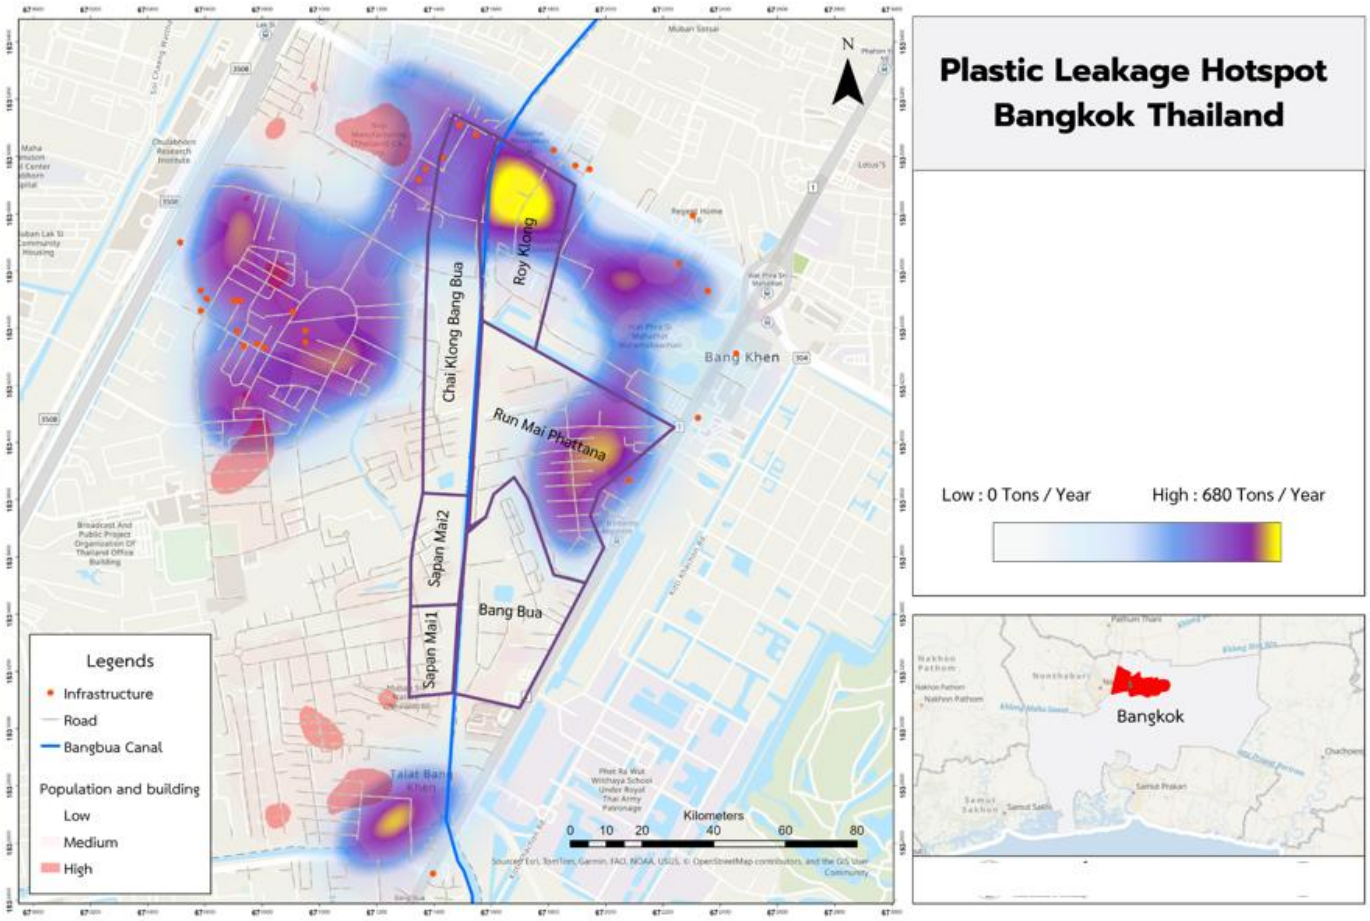

Waste generated in Bangkok, Thailand from 2003 to 2020

** Municipal solid waste (MSW), consists of everyday items that are discarded by the public, and includes food waste and plastic waste.*

Resource 5 for Question 2

Plastic leakage* hotspots in a district in Bangkok, Thailand**

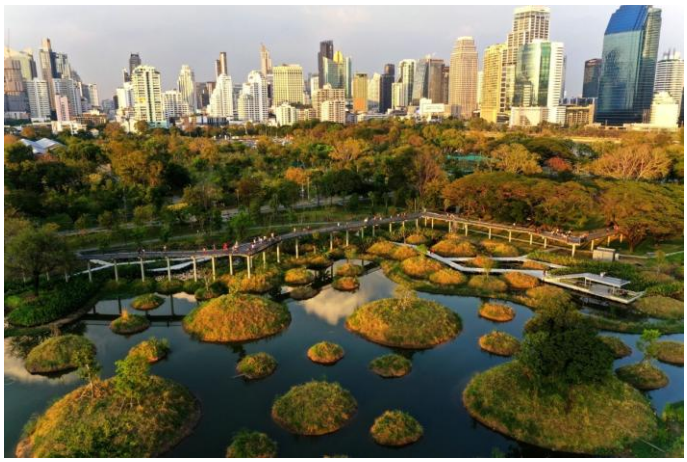

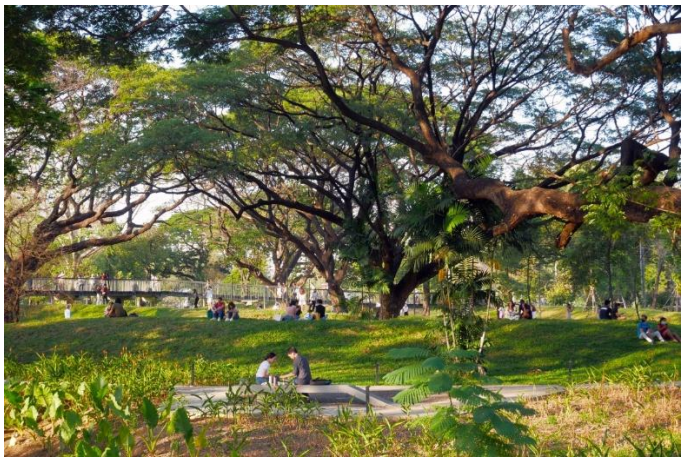

** Plastic leakage refers to plastic waste that escapes waste management systems in an area and accumulates in the surrounding environment.*

*** District pictured in Resource 5 hosts 6 local communities: Sapan Mai 1, Sapan Mai 2, Chai Klong Bang Bua, Roy Klong, Run Mai Phattana, and Bang Bua.*

Resource 6A for Question 2

Photographs of Benjakitti Forest Park

Resource 6B for Question 2

An article on the Benjakitti Forest Park

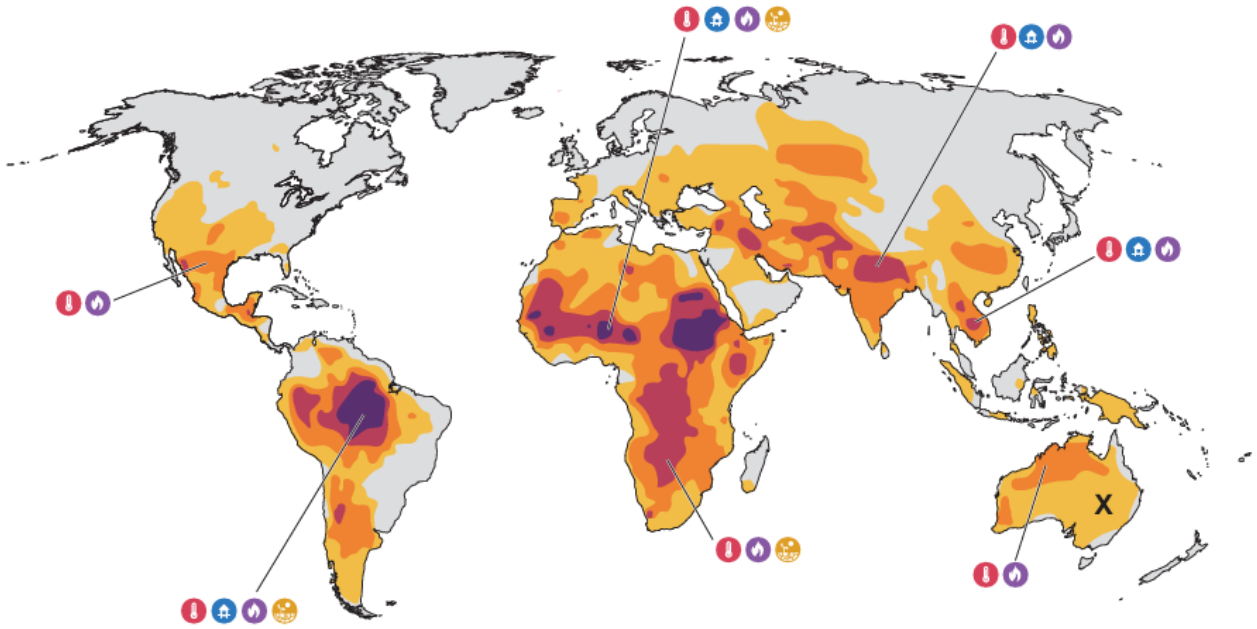

Bangkok, Thailand is situated in the Chao Phraya River delta where low elevation, inadequate drainage infrastructure, and global warming have combined to increase flood risk. Heavy downpours frequently overwhelm drainage systems, causing severe flooding across much of the city.

Completed in 2022, the Benjakitti Forest Park, developed on the site of a former tobacco factory in the busy centre of Bangkok, features hundreds of mounded islands surrounded by four lakes capable of holding a million cubic metres of stormwater. Its efficacy was demonstrated during the recent severe monsoon season when much of Bangkok flooded while the park and its vicinity remained unaffected. A rich variety of wildlife has also since taken up residence in the park, with 91 bird species recorded in this rewilded urban landscape.

The park has also become the largest central park in inner Bangkok, attracting a large number of local and foreign visitors daily for activities ranging from jogging and cycling to family gatherings and cultural celebrations. A skywalk and multiple boardwalks connect previously road-divided sections of the park, offering an immersive experience through tropical foliage. The original warehouses and production facilities have also been renovated into an indoor sports complex and a museum capable of accommodating up to 3,000 visitors. While entry to all zones of the Benjakitti Forest Park is free, visitors can engage paid local guides for a tour of the Park.

Resource 7 for Question 3

Global distribution of areas of greatest concern from climate-related impacts of global warming

* Areas of greatest concern for experiencing climate-related impacts at 4°C global warming relative to pre-industrial levels (1850–1900).

Key

climate-related impact

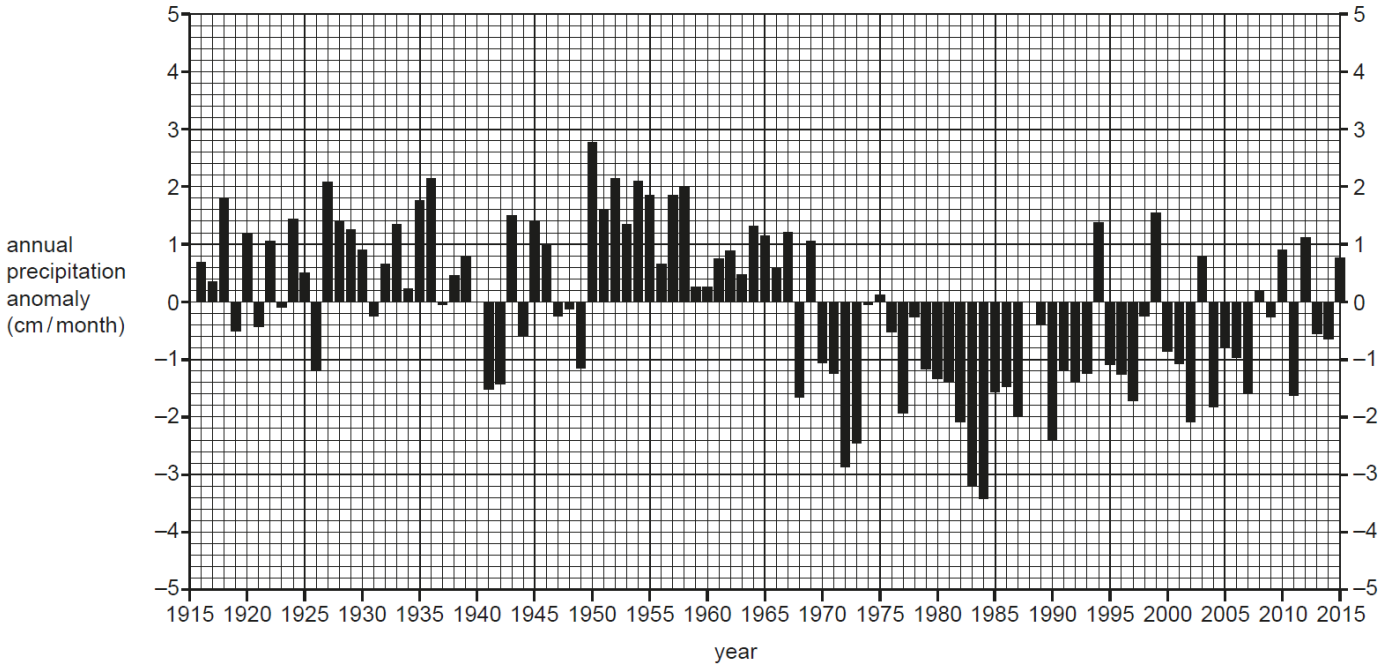

- extreme heat stress risk
- river flooding
- fire weather risk
- drought

number of climate-related impacts

- 4
- 3
- 2
- 1
- 0

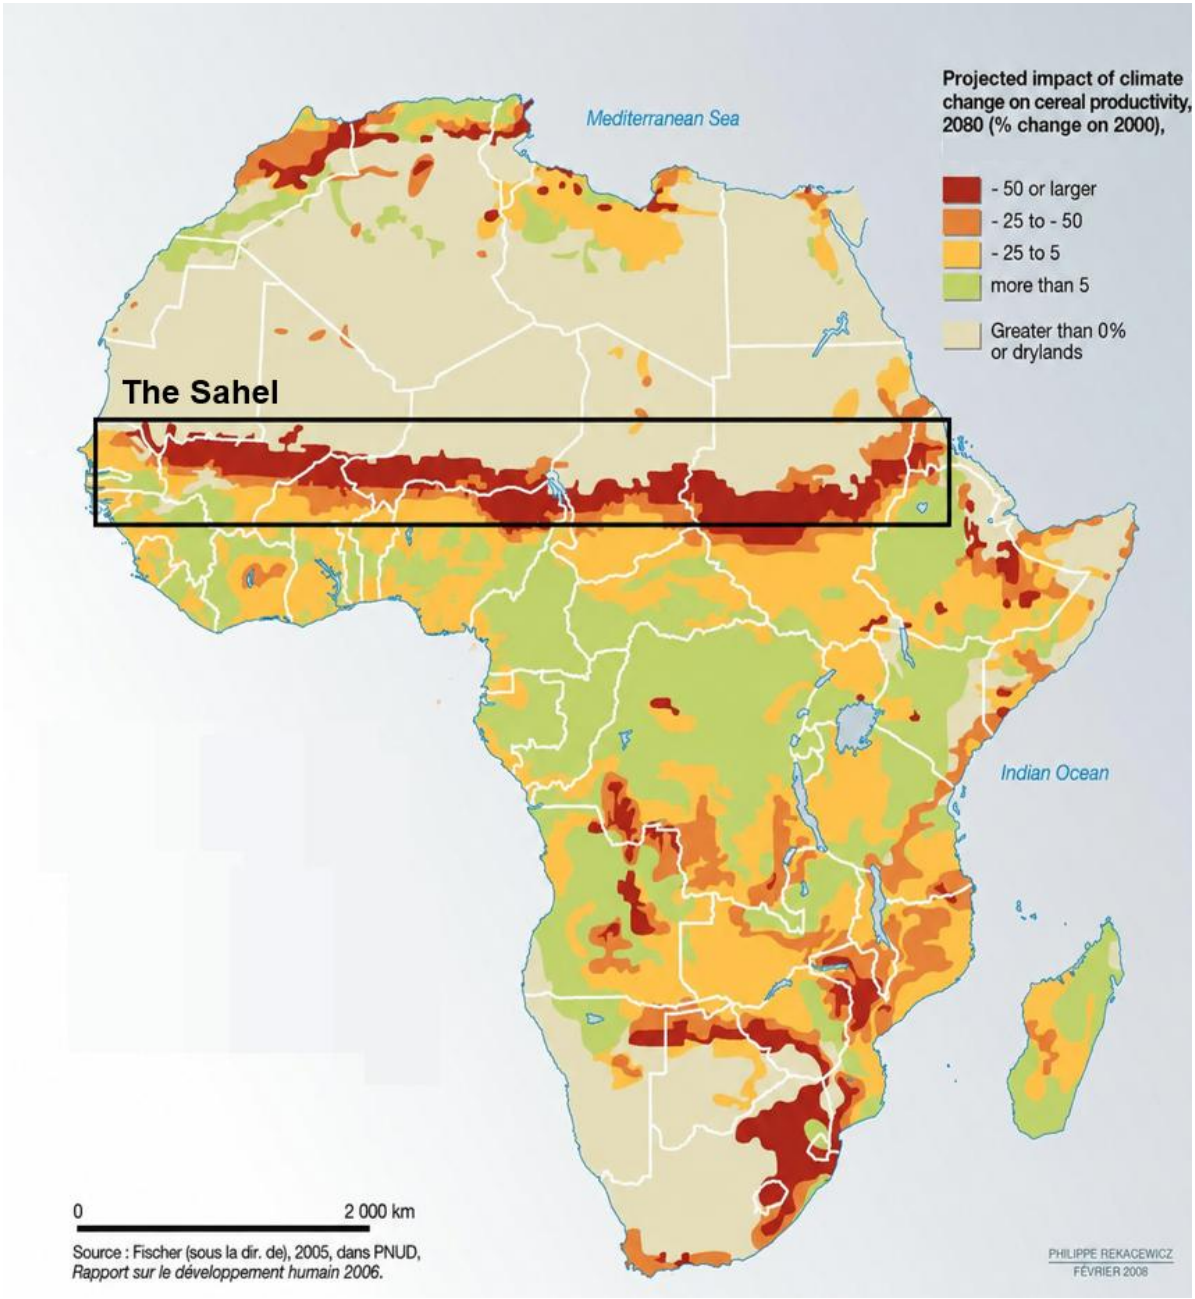

Resource 8 for Question 3

Annual precipitation anomalies for the Sahel from 1915 to 2015

Resource 9 for Question 3

Projected impact of climate change on cereal productivity in 2080, as a percentage change from 2000

Resource 10 for Question 3

An article on the impact of climate change on malaria transmission in African countries

Malaria is transmitted by mosquitoes that thrive in warm temperatures and stagnant water. African countries bear a disproportionate burden of the disease, with children under five making up 75% of African malaria deaths.

As the climate warms, it is projected that “disruptive” weather extremes, such as flooding, will worsen across much of Africa, accounting for 79% of increased malaria transmission risk and 93% of additional deaths from the disease. Rising temperatures and shifting rainfall patterns that change the habitable range for the mosquitoes that carry the disease will also contribute to the projected rise in malaria cases.

The impacts of climate change on malaria are already starting to be felt. For example, in Niger, malaria cases rose by 30% between 2019 and 2021, climbing from 2.19 million to 2.99 million cases. Transmissions also now extend further into the dry season, as late as February and March.
