Paper 2

9173/02

16 September 2026

3 Hours

Additional Materials: Insert

READ THESE INSTRUCTIONS FIRST

An answer booklet will be provided with this question paper. You should follow the instructions on the front cover of the answer booklet. If you need additional answer paper, ask the invigilator for a continuation booklet.

Section A
Answer Question 1**.**

Section B
Answer Question 2**.**

Section C
Answer one question.

The number of marks is given in brackets [ ] at the end of each question or part question.

Answer Questions 1 and 2 and
EITHER Question 3 **OR** Question 4

Section A

Cluster 4: Fieldwork

1 Three students from Noya Junior College wanted to find out if the reasons for the adoption of electric vehicles vary across age groups. They came up with the following hypothesis:

"*Singaporeans below the age of 36 years old who drive electric vehicles are more likely to do so to combat climate change than Singaporeans above the age of 60 years old.*"

The group decided to conduct their fieldwork in a neighbourhood with both public and private housing located within the Thomson-Sin Ming area as seen in Resource 1.

- In the private housing estate, the students walked around to identify households with electric vehicles in the garage. They interviewed households with electric vehicles in the garage.
- In the public housing estate, the students stationed themselves next to the electric car lots in the public car parks. They interviewed residents who parked there.

The students conducted the interviews on three weekday afternoons during their lunch hour, between 12-2pm.

Resource 1 is a map of the neighbourhood within the Thomson-Sin Ming area. Resource 2 shows the interview questions the students used. Resource 3 shows a pie chart of age of respondents. Resource 4 is a line graph for considerations in purchasing an electric vehicle.

(a) Explain **two** ways in which the hypothesis is appropriate. [4]

(b) With reference to Resource 1, explain why the site might not be suitable for the investigation. [3]

(c) Explain **two** sources of secondary data that could help the students achieve their investigation aim. [4]

(d) Suggest how the students could minimise potential risks in undertaking fieldwork. [4]

(e) With reference to Resource 2, explain how the interview questions could be improved. [5]

(f) Explain how the sampling of respondents as shown in Resource 3 could be improved. [6]

(g) Suggest an alternative graphical method for the data shown in Resource 4 and explain why it is better. [4]

(h) Evaluate the validity of the students' fieldwork. [10]

Section B

Cluster 3: Sustainable Future and Climate Change

2 Resource 5 shows the distribution of Waste-to-Energy (WtE) plants across China in 2020. Resource 6 shows the benefits of Waste-to-Energy (WtE) plants over landfills. Resource 7 shows the types of food waste and GHG emissions across different age groups. Resource 8 is an infographic on "Growing Green and Resilient Cities".

(a) Describe the distribution of Waste-to-Energy (WtE) plants across China in 2020 as shown in Resource 5. [5]

(b) With reference to Resource 6, account for the benefits of Waste-to-Energy (WtE) plants over landfills. [4]

(c) Compare the problems associated with non-hazardous solid waste in urban areas of countries at different levels of development. [6]

(d) With reference to Resource 7, describe how food waste and GHG emissions change across the different age groups. [4]

(e) Suggest ways in which elderly residents can respond to contemporary climate change. [5]

(f) Using Resource 8, explain how green and resilient cities can contribute to the social well-being and economic vitality of urban areas. [6]

Section C

Answer **either** Question 3 **or** Question 4.

Cluster 3: Sustainable Future and Climate Change

3 Evaluate the extent to which gender influences people's experience of living in urban areas. [20]

4 "Political challenges are the most significant challenges in implementing strategies to respond to climate change."

Evaluate this statement. [20]
