Name: _____ **Class:** _____

JURONG PIONEER JUNIOR COLLEGE

JC2 Preliminary Examination 2026

GEOGRAPHY **8834/01**

Higher 1 **31 August 2026**

Paper 1 **3 hours**

Additional materials: Insert

READ THESE INSTRUCTIONS FIRST

An answer booklet will be provided with this question paper. You should follow the instructions on the front cover of the answer booklet. If you need additional answer paper ask the invigilator for a continuation booklet.

Answer Question 1 in **Section A**.
Answer both questions in **Section B**.
Answer **two** questions in **Section C**.

The number of marks is given in brackets [ ] at the end of each question or part question.

This document consists of **4** printed pages and **1** insert.

[Turn over

Section A

Cluster 2: Fieldwork

1 A group of six students in Singapore carried out fieldwork to investigate recycling efforts among different age groups in Singapore. The aim of the investigation was to compare the participation of youths in the Beverage Container Return Scheme with that of other older age groups. The Beverage Container Return Scheme encourages consumers to "Return Right" by returning their empty beverage containers made of plastic and metal at dedicated return points across Singapore. The hypothesis was:

Youths are more inclined to participate in the Beverage Container Return Scheme than other age groups.

To test their hypothesis, they counted the number of people (including youths) returning empty beverage containers at return points in Bukit Panjang. Among all the return points in the neighbourhood, three were chosen. The students conducted the study from 8:00 am to 11:00 am on a Friday morning, and they divided themselves into three groups to collect data at the three return points concurrently. In addition, the students also administered questionnaire surveys with youths at the return points who agreed to participate in the study.

Resource 1A is a map showing the locations of the three return points in Bukit Panjang marked as X, Y and Z. Resource 1B shows photographs of the three return points. Resource 2 shows the data collected at each site. Resource 3 shows the questionnaire used by the students.

(a) Suggest how the students' hypothesis can be improved. [3]

(b) With reference to Resources 1A and 1B, explain one strength and one limitation of the selected return points. [4]

(c) Suggest how students could minimise the impact of their investigation at the three return points. [4]

(d) Describe how the data shown in Resource 2 may be represented. [4]

(e) Explain how the questionnaire shown in Resource 3 may be improved. [5]

(f) Evaluate the data collection methods for this investigation. [10]

Section B

Cluster 1: Sustainable Future and Climate Change

Answer **both** questions.

2 Resource 4A shows Warton Road in Stratford, East London, in 2005, before reimaging. Resource 4B shows the same location in 2012, after reimaging. Resource 5 shows changes in selected land uses in East London from 2005 to 2015. Resource 6 shows the Olympic Park and surrounding areas in East London during the London 2012 Olympic Games and in 2015.

(a) Explain the economic reasons for urban reimaging efforts. [4]

(b) Using Resources 4A and 4B, describe the changes to the built environment along Warton Road, Stratford, from 2005 to 2012. [3]

(c) Explain how the changes to the built environment as shown in Resources 4A and 4B may improve the liveability of Stratford, East London. [5]

(d) With reference to Resources 5 and 6, explain how the London 2012 Olympic Games has contributed to sustainable urban development. [6]

(e) Using named example(s), suggest why urban reimaging strategies may be unsuccessful. [4]

3 Resource 7 shows global sea surface temperature anomalies, March 2024. Resource 8 shows an article on the impacts of climate change on aquatic ecosystems. Resource 9 shows projected global mean sea-level rise under different greenhouse gas emissions scenarios.

(a) Using Resource 7, describe the global sea surface temperature anomalies in March 2024. [4]

(b) Suggest how contemporary climate change may accelerate warming through positive feedbacks. [3]

(c) With reference to Resource 8, explain how changes in aquatic ecosystems as a result of contemporary climate change can affect humans. [7]

(d) Using Resource 9, compare possible pathways for future sea level rise under different greenhouse gas emissions scenarios. [4]

(e) Suggest reasons why projections of future sea-level rise remain uncertain. [4]

Section C

Cluster 1: Sustainable Future and Climate Change

Answer **two** questions.

4 Evaluate the impact of multiple deprivations experienced by slum dwellers on sustainable urban development. [13]

5 'There is greater complementarity than tension between sustainable urban development and liveability.'

Evaluate this statement. [13]

6 Evaluate the success of adaptation strategies in responding to climate change. [13]
