NANYANG JUNIOR COLLEGE
Year 2 Preliminary Examination

H1 GEOGRAPHY 8834/01

15 Sept 2026

3 hours

Additional Materials: Insert

READ THESE INSTRUCTIONS FIRST

If you have been given an Answer Booklet, follow the instructions on the front cover of the Booklet.
Write your Centre number, index number and name on the work you hand in.
Write in dark blue or black pen on both sides of the paper.
You may use an HB pencil for any diagrams or graphs.
Do not use staples, paper clips, glue or correction fluid.
DO NOT WRITE ON ANY BARCODES.

Answer Question 1 in **Section A.**
Answer **both** questions in **Section B**.
Answer **two** questions in **Section C**.

At the end of the examination, fasten all your work securely together.
The number of marks is given in brackets [ ] at the end of each question or part question.

Section A

Cluster 2 Fieldwork

1 A group of 10 JC2 Geography students conducted fieldwork to investigate whether community responses to climate change were influenced by age. They decided to do their study in Queenstown, a mature town in Singapore so that they might be able to get a bigger representation of the older age group.

The students proposed the following hypothesis:
Community response to climate change is more evident in younger people than the elderly in Queenstown, Singapore.

They measured **community response** with the following yardsticks:
1. awareness of climate-change initiatives;
2. concern about climate change;
3. willingness to adopt climate-friendly actions; and
4. participation in climate-friendly activities.

The students conducted their fieldwork on a Saturday from 11 am to 2pm at two different sites. At each site, they approached every third adult passer-by near the two sites and obtained 120 complete questionnaires in total. They also conducted visual observations of the place and the passers-by to identify evidence of how the local community was responding to climate change.

Resource 1 shows the 2 sites where the students did their fieldwork - Queenstown MRT Station Exit A and Margaret Drive Hawker Centre. Resource 2 shows the questionnaire the students used to conduct their fieldwork. Resource 3 shows the collated results of the fieldwork. Resource 4 shows the student's visual observation of the surroundings and behaviour of people at the two sites, together with photographs.

(a) with reference to Resource 1, explain why the hypothesis is appropriate for the investigation. [4]

(b) Identify **two** potential risks the students might face when carrying out fieldwork at both sites and explain how they could minimize these risks. [6]

(c) With reference to Resource 3, explain the usefulness and limitations of the representation method used to present the data collected. [6]

(d) Suggest **two** ethical issues that might arise from the students' investigation and explain how each could be addressed. [4]

(e) The students concluded that community responses to climate change are more evident among younger people than among the elderly in Queenstown. Evaluate the validity of this conclusion with reference to all the resources. [10]

Section B

Cluster 1 Sustainable Future and Climate Change

Answer **both** questions

2 Resource 5 shows the spatial variation in average house prices (£) across the Netherlands in 2022. Resource 6 shows the changes to a neighbourhood in the Netherlands before and after urban reimaging. Resource 7 shows the Urban Renewal Matrix, which presents the social, economic and physical outcomes of urban renewal.

(a) With reference to Resource 5, describe the spatial variation in average house prices (£) across the Netherlands in 2022. [3]

(b) With reference to Resource 5, explain possible reasons for the spatial variation in average house prices across the Netherlands in 2022. [6]

(c) With reference to Resource 6, describe the changes to the physical environment resulting from urban reimaging. [4]

(d) Using Resource 7, explain why the impacts of urban reimaging on local residents may be uneven. [5]

(e) With reference to Resource 7, suggest two ways urban reimaging could be managed to improve the liveability of the neighbourhood for existing residents. [4]

3 Resource 8 shows the climate change vulnerability across Southeast Asia, excluding Myanmar, where darker colours indicate higher levels of vulnerability. Resource 9 shows Estimated impacts of climate change across Southeast Asia. Resource 10 shows the spatial variation in adaptive capacity to climate change across Southeast Asia, where higher index values indicate greater adaptive capacity.

(a) Cite data from Resource 8 to describe the spatial variation in climate change vulnerability across Southeast Asia. [4]

(b) Using Resource 9, compare the estimated impacts of sea-level rise with those of a 2°C rise in temperature across Southeast Asia. [4]

(c) With reference to Resource 9, explain **two** possible impacts associated with a 2°C rise in temperature across Southeast Asia. [4]

(d) With reference to Resource 8 and 10, explain why countries in Southeast Asia may differ in their ability to cope with and adapt to the impacts of climate change. [6]

(e) Suggest **two** adaptation strategies that could reduce the vulnerability of communities to climate change. [4]

Section C

Answer **two** questions

4 'Slums develop as a result of poverty.' Evaluate this statement. [13]

5 Evaluate the extent to which human activities result in climate change. [13]

6 'Economic challenges are the main barrier to implementing strategies to respond to contemporary climate change'. Evaluate this statement. [13]
