YISHUN INNOVA JUNIOR COLLEGE
JC 2 PRELIMINARY EXAMINATION
Higher 1

CANDIDATE NAME

CG | INDEX NO

GEOGRAPHY **8834/01**

Paper 1 **19 August 2026**

Additional Materials: Answer Booklet
Insert **3 hours**

READ THESE INSTRUCTIONS FIRST

Write your name and class in the spaces at the work you hand in.
Write in dark blue or black pen on both sides of the paper.
You may use an HB pencil for any diagrams or graphs.
Do not use staples, paper clips, glue or correction fluid/tape.

The use of an approved scientific calculator is expected, where appropriate.

Answer Question 1 Section A.
Answer both questions in Section B.
Answer two questions in Section C.

You should make reference to appropriate examples studied in the field or the classroom, even where such examples are not specifically requested by the question.
Diagrams and sketch maps should be drawn whenever they serve to illustrate an answer.

You are reminded of the need for good English and clear presentation in your answers.
At the end of the examination, insert the extra booklet(s) used within the main booklet.
The number of marks is given in brackets [ ] at the end of each question or part question.

Section A

Cluster 2 : Fieldwork

1 Urban reimaging has been widely adopted in many cities to revitalise declining urban areas and improve their liveability. In Manchester, the Sackville Street and Canal Street have undergone extensive regeneration, introducing new public spaces, mixed land uses and transport infrastructure. As Manchester's population continues to age, there is increasing emphasis on ensuring that regenerated urban environments are inclusive and meet the needs of elderly residents.

A group of 18 Geography students from Singapore's Champion Junior College visited Manchester from 1–5 December 2025 to investigate the inclusiveness of urban reimaging in meeting the needs of elderly residents in the Sackville Street and Canal Street.

The students developed the following research question:

How inclusive is urban reimaging in meeting the needs of elderly residents in Manchester's Sackville Street and Canal Street?

To investigate this question, the students conducted a questionnaire survey of 50 elderly residents and foreign visitors using convenience sampling. The respondents comprised :

60–69 years: 21 residents and 6 foreign visitors (27 respondents)
70–79 years: 13 residents and 3 foreign visitors (16 respondents)
80 years and above: 5 residents and 2 foreign visitors (7 respondents)

The survey examined respondents' perceptions of personal safety, accessibility, opportunities for social interaction and inclusion, and overall liveability. The students also carried out land-use mapping, pedestrian counts, and an accessibility audit to assess the provision of age-friendly infrastructure, including benches, ramps, lifts, tactile paving, pedestrian crossings and barrier-free access.

Resource 1 shows a map of the study area. Resource 2 shows photographs taken during the field investigation. Resource 3 provides the questionnaire used by the students. Resource 4 presents the data collected from the questionnaire survey.

(a) Explain whether the students' research question is suitable. [4]

(b) Using Resource 2, explain which of the two study sites, Location A or B, is more suitable for investigating the impact of urban reimaging on elderly residents. [4]

(c) Explain the strengths and limitations of the students' sampling strategy and sample size. [4]

(d) Using Resource 3, describe how you would improve the questionnaire. [4]

(e) With reference to Resource 4, explain the best way the students can present the data they collected from the questionnaire. [4]

(f) Evaluate the effectiveness of the data collection methods used to investigate whether urban reimaging has created an inclusive environment for elderly residents. [10]

Section B

Cluster 1: Sustainable Future and Climate Change

2 Resource 5 shows Singapore's waste recycled (2015-2025). Resource 6 shows Singapore's changing plastic waste (2014-2023). Resource 7 shows garbage and sewage waste pile up on Mumbai's Juhu Beach. Resource 8 shows the changing Earth's surface temperature (1850-2025).

(a) Using Resource 5, describe the changes in Singapore's waste recycling rates between 2015 and 2025. [4]

(b) With reference to Resource 6, explain why plastic waste remains a significant waste management challenge in Singapore. [4]

(c) Using Resource 7, explain how the accumulation of plastic waste can reduce the liveability of nearby coastal communities. [4]

(d) Using Resources 7 and 8, explain how climate change may worsen the impacts of plastic pollution on aquatic ecosystems. [4]

(e) Explain why no single waste management strategy can effectively address non hazardous solid waste problems. [6]

3. Resource 9 shows the global climate risk index (2000-2019). Resource 10 shows some primary climate hazards. Resource 11 shows positive and negative climate feedback loop.

(a) Using Resource 9, describe the spatial pattern of areas vulnerable to climate change. [4]

(b) With reference to Resources 9 and 10, explain why some urban areas are more vulnerable to climate change than others. [6]

(c) Explain two positive impacts of contemporary climate change on places. [4]

(d) Explain why the study of ice cores provides convincing evidence of climate change. [4]

(e) Using Resource 11, explain why there is uncertainty in projections of future climate change. [4]

Section C

Cluster 1 : Sustainable Future and Climate Change

Answer **two** questions.

4. 'Housing policies are the most important factor in creating liveable cities.' Evaluate this statement. [13]

5. Evaluate the success of the strategies to address the issues faced by women living in cities. [13]

6. 'International cooperation is the key to addressing future climate change.' Evaluate the validity this statement. [13]

[TOTAL MARKS : 100]
