Resource 1 for Question 1

International migrant workers (%) by region of destination in 2022

Resource 2 for Question 1

Major free trade agreements of Singapore

Resource 3 for Question 1

Woes of Indonesian small and medium-sized enterprises

Jakarta – Indonesia is home to over 62 million small and medium-sized enterprises (SMEs), an impressive figure that equates to one SME for every five Indonesians. Of these, a staggering 98.75% (or 61.5 million) are classified as micro-enterprises. While these businesses form the backbone of the national economy and hold immense potential to drive future growth, many are facing critical challenges in their development journey.

A key issue lies in the lack of clarity among business owners about where they stand in terms of growth. Despite tireless efforts, many entrepreneurs find themselves in a state of stagnation, which they often mistake as the natural peak of their business. This false perception leads some to prematurely diversify or venture into entirely new industries, moves that risk diluting their core strengths and strategic focus.

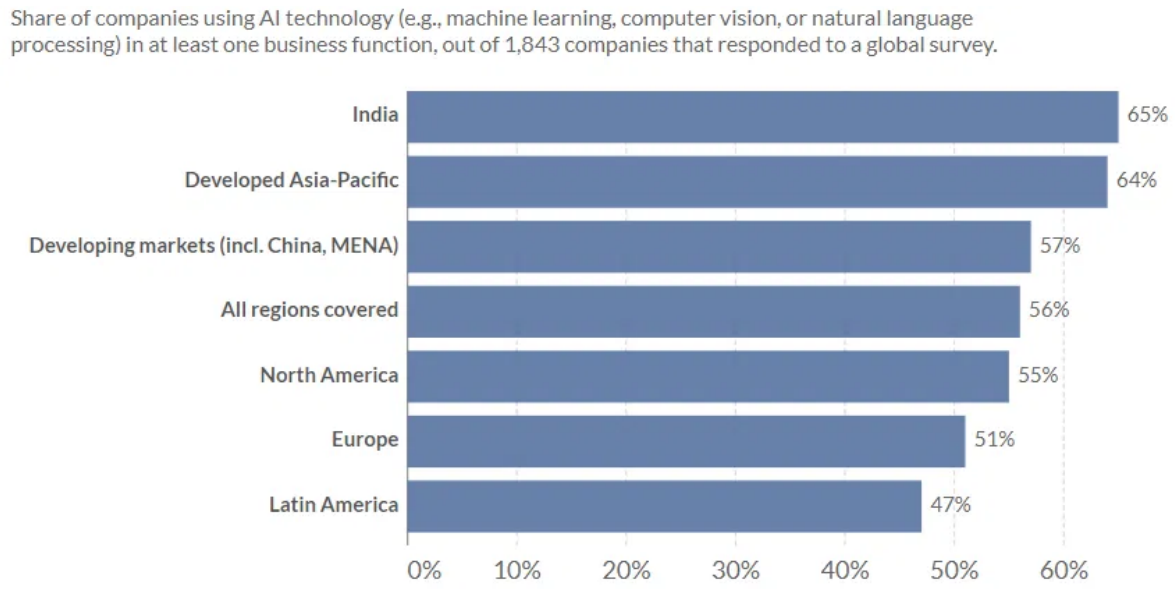

Experts say this stagnation is largely attributed to low productivity levels, often a consequence of SMEs' limited scale, experience, and access to capital. Without sufficient investment, many small businesses struggle to adopt new technologies or acquire the skills needed to compete effectively in a rapidly evolving market.

The situation has been further exacerbated by intensifying competition from transnational corporations (TNCs). TNCs, with their global supply chains and ability to harness economies of scale, are increasingly dominating sectors where local SMEs once thrived. As a result, several Indonesian SMEs are either struggling to keep up or worse, shutting down.

Analysts warn that unless comprehensive support is extended to help SMEs scale sustainably and tap into their full potential, Indonesia risks losing a vital pillar of its economy to global forces.

Resource 4 for Question 1

Share of companies using Articifial Intelligence (AI) in 2021

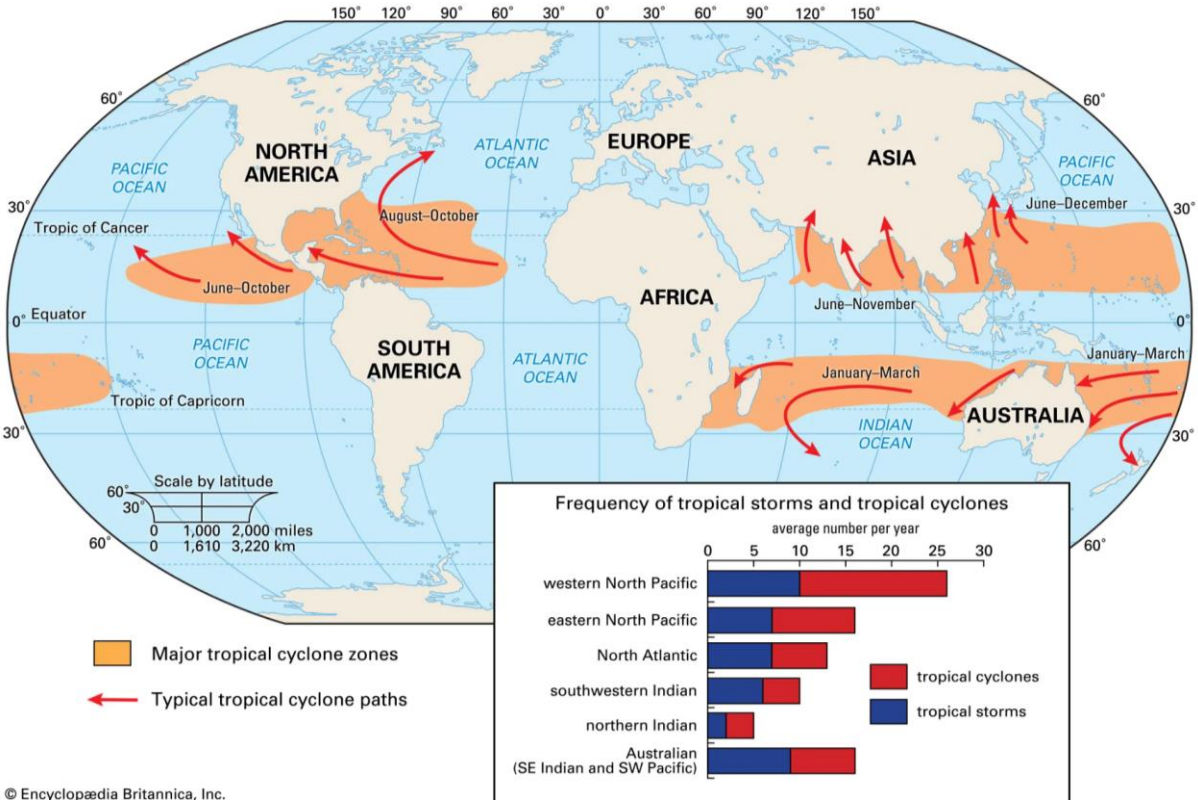

**The "Developed Asia Pacific" region primarily encompasses high-income, industrialized economies in Asia. It includes countries and territories like Japan, Australia, Hong Kong, Singapore, and New Zealand, all recognized for their strong economies, advanced infrastructure, and high standards of living.*

** The MENA region, or Middle East and North Africa, is a geographical and often culturally defined area encompassing countries in the Middle East and North Africa. It typically includes countries stretching from Morocco in Northwest Africa to Iran in Southwest Asia, and down to Sudan in Africa.*
