YISHUN INNOVA JUNIOR COLLEGE
JC 2 PRELIMINARY EXAMINATION 2025
**Higher 2**

CANDIDATE NAME

CG

INDEX NO

# GEOGRAPHY

**9173/02**

Paper 2

**18 SEPT 2025**

Additional Materials:
Insert

**3 Hours**

**READ THESE INSTRUCTIONS FIRST**

Write your name and class in the spaces at the top of this page.
Write in dark blue or black pen.
You may use a pencil for any diagrams or graphs.
Do not use staples, paper clips, highlighters, glue or correction fluid/tape.

Section **A**.
Answer **Question 1**.

Section **B**.
Answer **Question 2**.

Section **C**.
Answer **one question**.

The use of an approved scientific calculator is expected, where appropriate.

The number of marks is given in brackets [ ] at the end of each question or part question.

At the end of the examination, fasten all your work securely together.

Answer Questions 1 and 2 and
**EITHER** Question 3 **OR** Question 4.

## Section A

### Cluster 4 Fieldwork

**1** A group of 8 JC2 geography students wanted to investigate community responses to climate change risks in Singapore.

They selected the Marine Parade area, with its housing developments facing direct exposure to the risk of sea-level rise. They chose Neptune Court, a private condominium development with 752 residential units and the public housing blocks of Marine Terrace (Blocks 1 to 3) with 288 residential units.

The students' hypothesis was: "People living in Marine Parade are more ready for climate change than other people in Singapore."

They only used a survey as part of data collection. They conducted the survey on a Tuesday during the June school holidays from 1pm to 3pm at Neptune Court and repeated it at Marine Terrace the following Tuesday at the same time slot. To quickly meet their target of 20 people per housing development, the students prioritized approaching people who were in groups, before asking individuals.

The students also visited East Coast Park after completing their survey as it was near the two neighbourhoods. They also took some photographs and videos of all the locations they visited.

Resource 1 is a 3D map of the students' fieldwork locations. Resource 2 shows a photograph taken by the students. Resource 3 shows the profiles of the survey respondents. Resource 4 shows all the questions and responses of the survey.

**(a)** Explain two improvements the students can make to their hypothesis. [4]

**(b)** Suggest how the students could mitigate two risks during data collection. [4]

**(c)** Explain how students could reduce the impacts of their investigation. [4]

**(d)** With reference to Resource 3, explain how the students could improve their sample population. [6]

**(e)** Explain how the students can collect two other types of data for their investigation. [6]

**(f)** Using Resource 4, represent the data with a more appropriate data representation method. [6]

**(g)** Based on the survey results, the students concluded that people living in Marine Parade are more ready for climate change than other people in Singapore.

Evaluate the validity of their conclusion. [10]

## Section B

## Cluster 3 Sustainable future and climate change

**2** Resource 5 shows the countries' waste performance score on the Yale Environmental Performance Index in 2024. Resource 6 shows waste issues in an urban area in India. Resource 7A and 7B show the existing and proposed solid waste management in Ahmedabad, India. Resource 8 shows the before and after pictures of the Seoul Cheonggyecheon Restoration Project in South Korea. The Seoul government redeveloped an 18-lane elevated highway into a revitalized stream with green public space.

**(a)** Using Resource 5, describe the pattern of countries' waste performance score on the Yale Environmental Performance Index in 2024. [3]

**(b)** With reference to Resource 6, explain the impact of problems associated with non-hazardous solid waste in urban areas on sustainable urban development. [6]

**(c)** Using Resource 7A and Resource 7B, describe the changes observed between the existing and proposed solid waste situation in Ahmedabad, India. [5]

**(d)** Explain two ways in which waste issues can contribute to climate change. [4]

**(e)** Explain three economic reasons why urban areas choose to engage in urban reimaging projects like those shown in Resource 8. [6]

**(f)** With reference to Resource 8, explain how urban reimaging projects could affect urban liveability for different groups of people. [6]

## Section C

Answer **EITHER** Question 3 **OR** Question 4

**3** "Providing public housing is the best way to improve the lives of slum dwellers in urban areas."

Evaluate the validity of this statement. [20]

**4** "Climate change affects everyone and everywhere the same way."

Evaluate the validity of this statement. [20]
