JC2 H2 Geography Preliminary Exam (2026)

H2 GEOGRAPHY **9173/ 01**

21 August 2026

INSERT **3 hours**

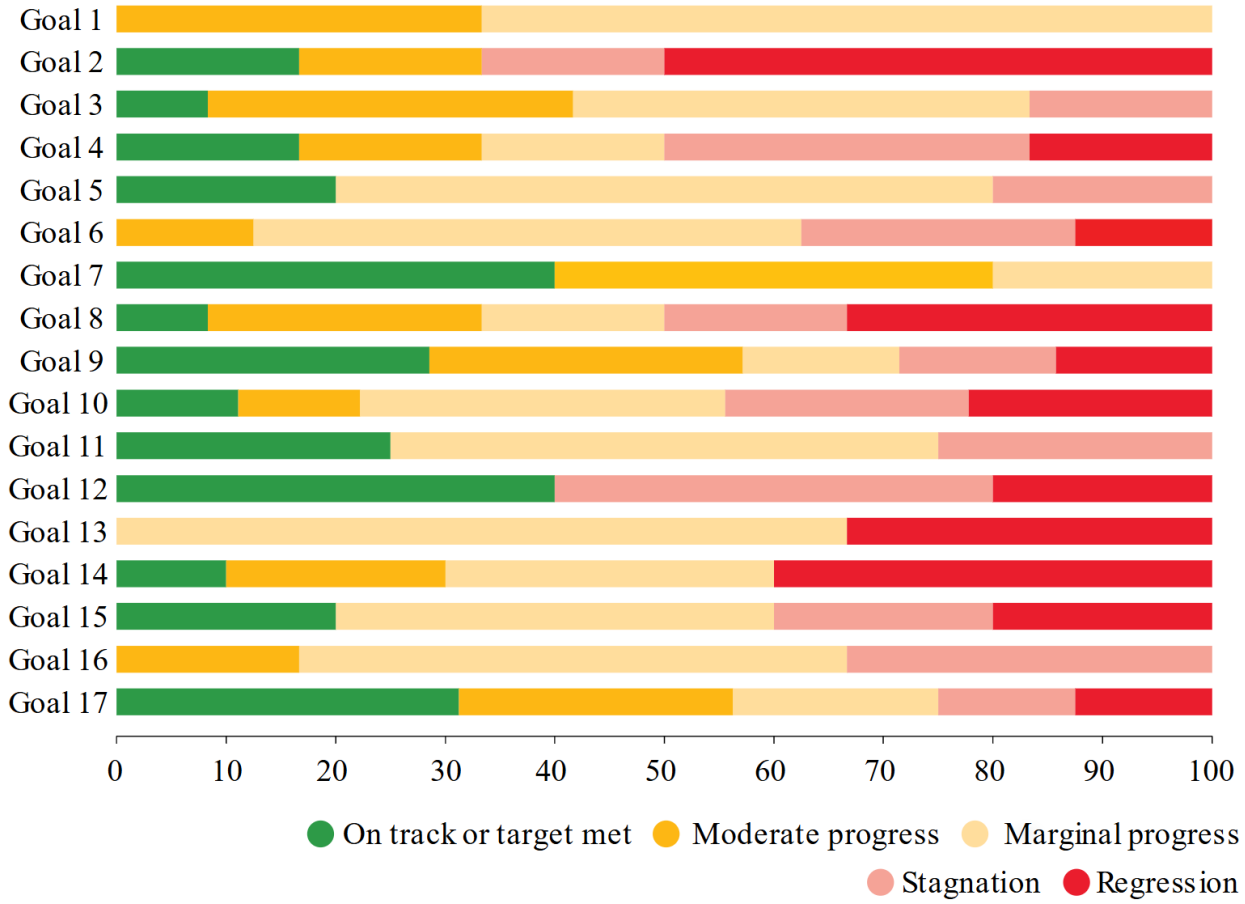

READ THESE INSTRUCTIONS FIRST

The Insert contains all the Resources referred to in the questions.

BLANK PAGE

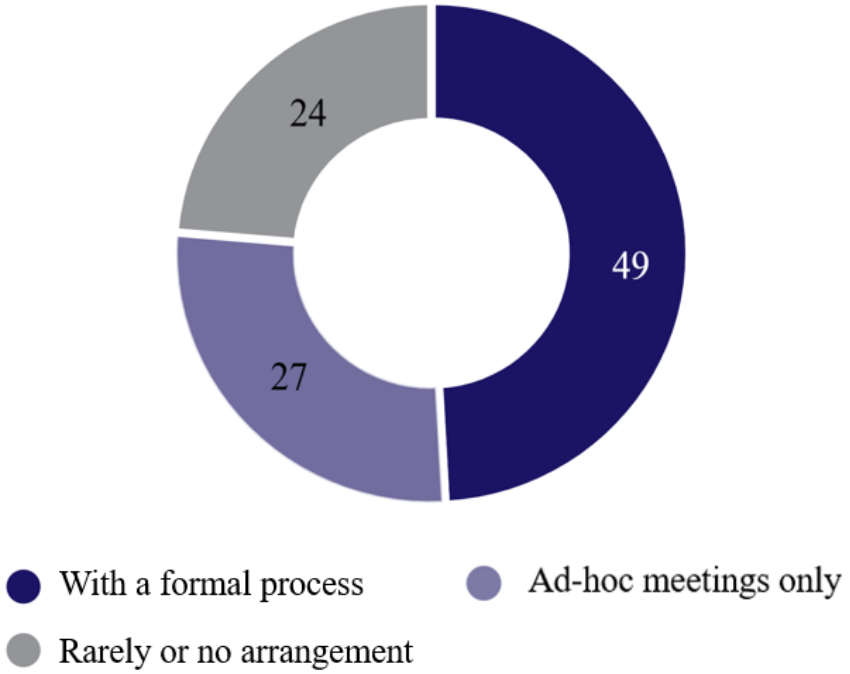

Resource 1 for Question 1

Progress assessment for the 17 Sustainable Development Goals (SDGs) based on assessed targets

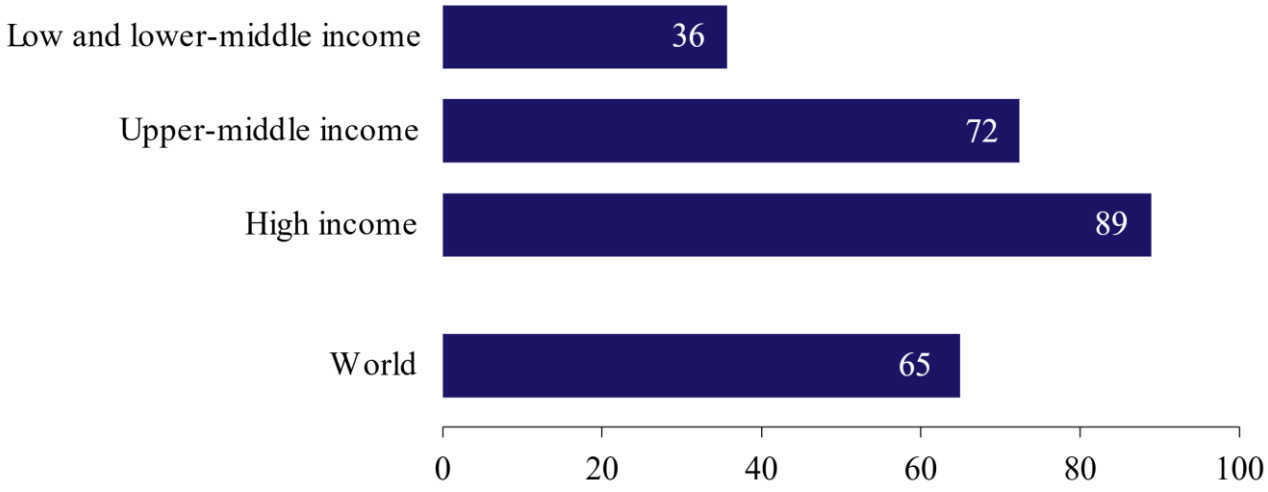

Resource 2A for Question 1

Proportion of national-level governments who partner with city-level governments to collect data on progress towards the Sustainable Development Goals in 2023 (in percentage)

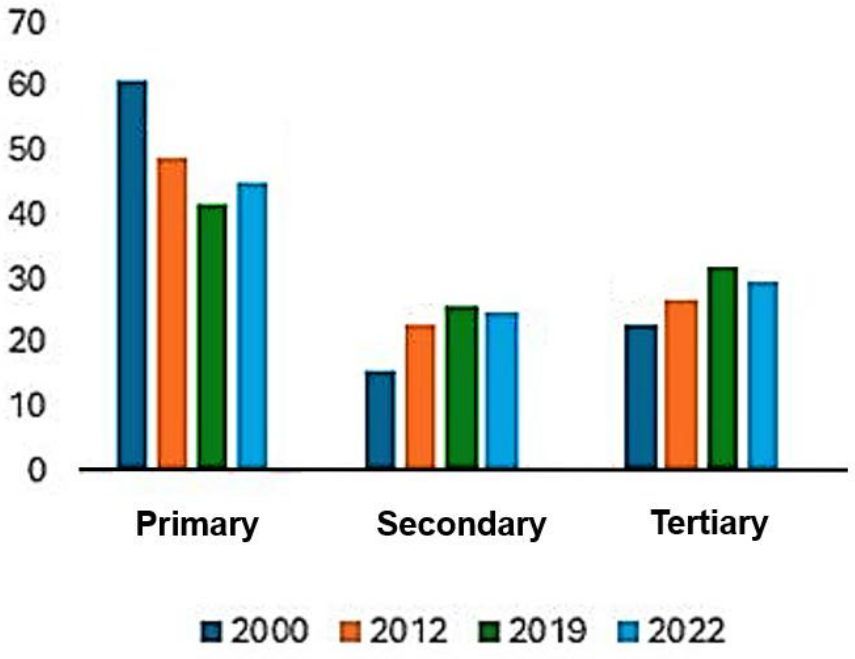

Resource 2B for Question 1

Proportion of countries with fully-funded strategies to collect data under implementation in 2023 (in percentage)

Resource 3 for Question 1

Share of employment per economic sector for India from 2000 to 2022 (in percentage)

Resource 4A for Question 1

Map of the Brahmaputra River and its riparian states

Resource 4B for Question 1

Article on the proposed construction of the Yarlung Tsangpo Grand Dam on the Brahmaputra River

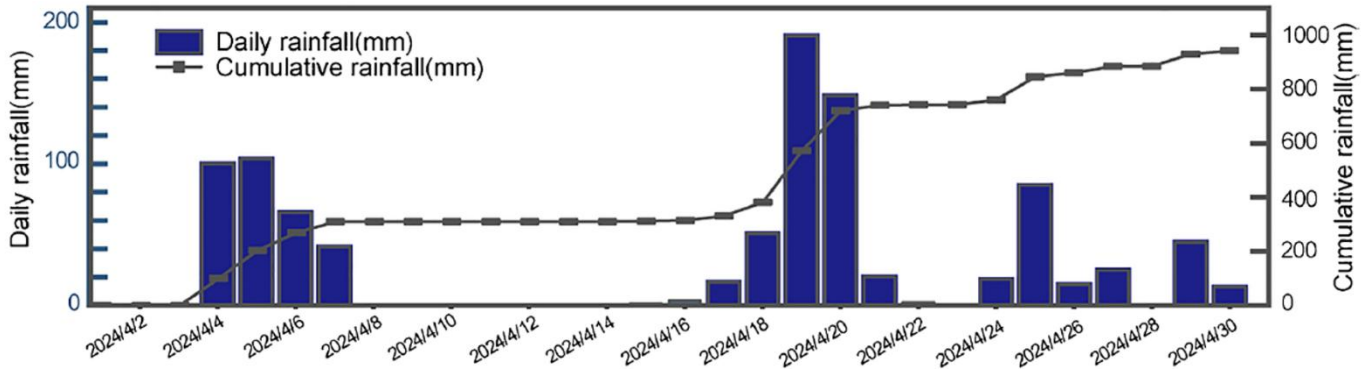

Over the past two decades, declining rainfall and rising temperatures across the Brahmaputra River Basin, shared by the riparian states of China, India and Bangladesh, have reduced total water availability in one of the world's most climate-vulnerable regions.

Into this picture comes China's proposed construction of the Yarlung Tsangpo Grand Dam near the Great Bend, just 50 kilometres from the Indian border. Projected to generate 60 gigawatts of power – nearly three times the capacity of the Three Gorges Dam – the project is central to China's ambitions to stabilise its energy supply and achieve carbon neutrality by 2060.

However, the consequences of the construction of the dam are likely to be far-reaching downstream, compounded by the lack of a water-sharing treaty between China, India, and Bangladesh. Currently, the river provides water to the northeastern states of India, supporting nearly 130 million people and six million hectares of farmland across the downstream plains. And as the Brahmaputra transforms into the Jamuna River in Bangladesh, its flow not only meets 55 percent of the country's irrigation needs but also supports fisheries sustaining two million fishermen across the region.

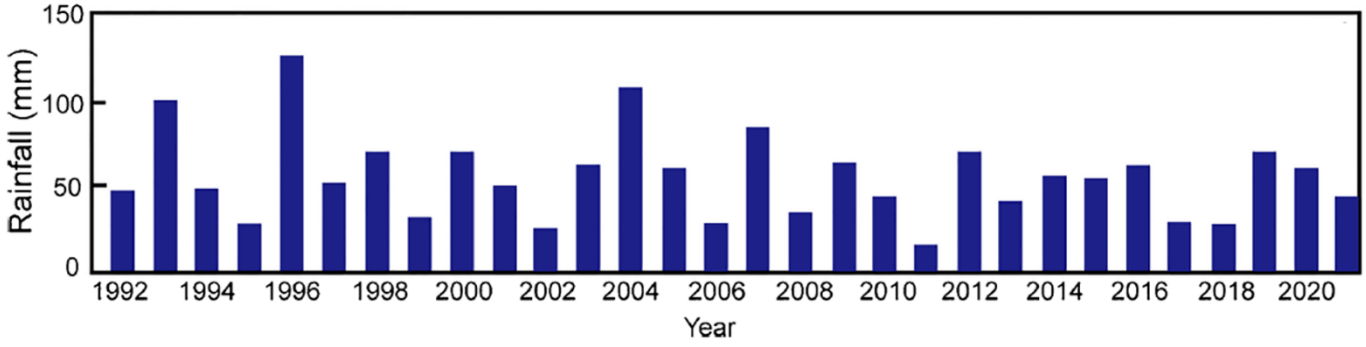

Resource 5A for Question 2

Daily rainfall and cumulative rainfall distribution in Shaoguan in April 2024

Resource 5B for Question 2

Distribution of rainfall in April for the past 30 years in Shaoguan

Resource 6 for Question 2

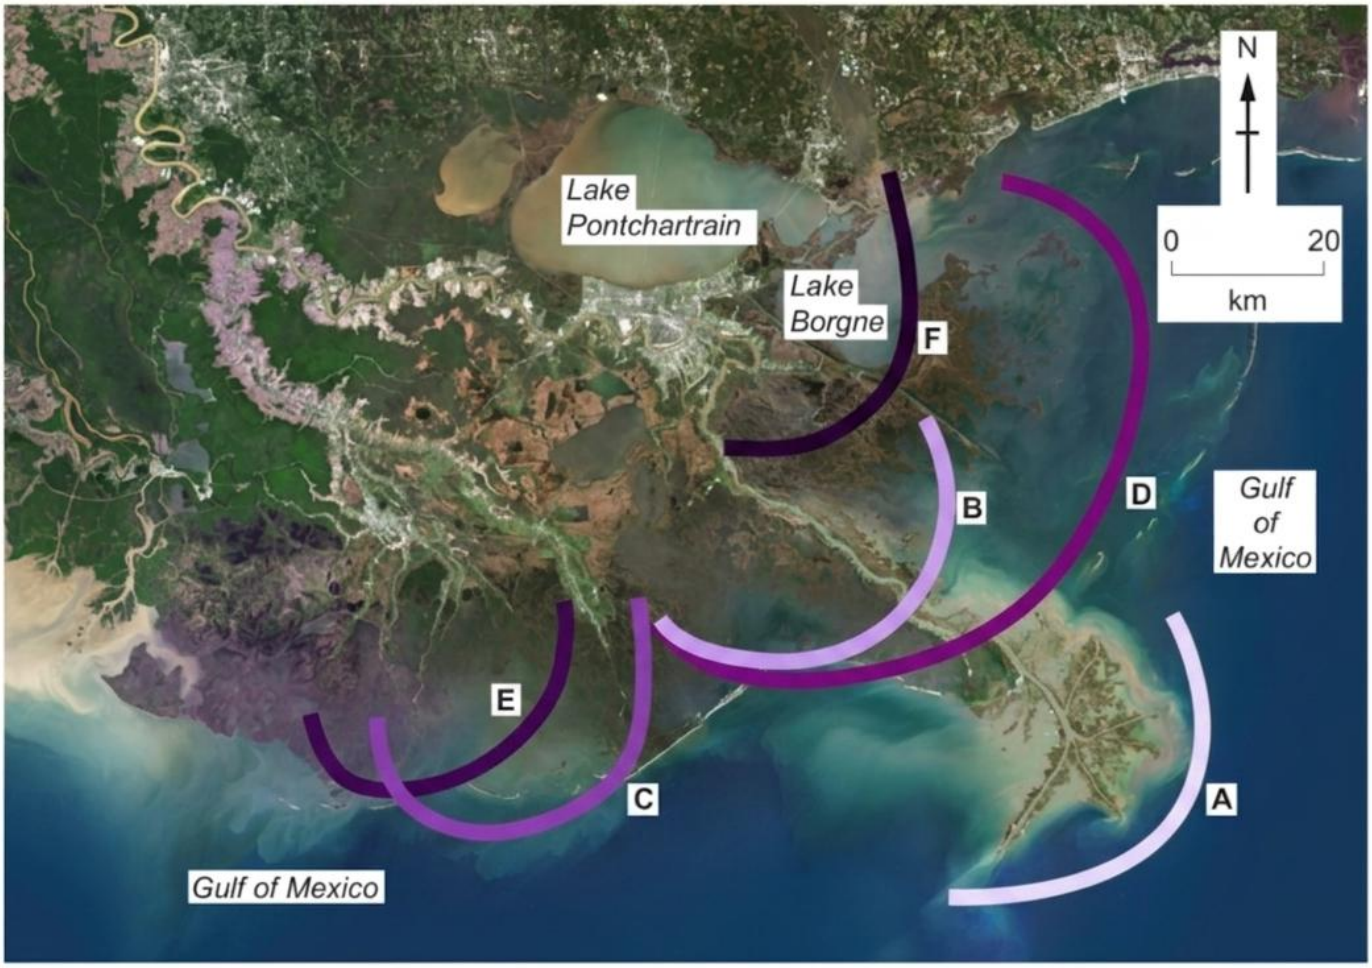

Mass movement in Jiangwan Town on 24 April 2024
