READ THESE INSTRUCTIONS FIRST

This Insert contains all the Resources referred to in the questions.

Resource 1 for Question 1

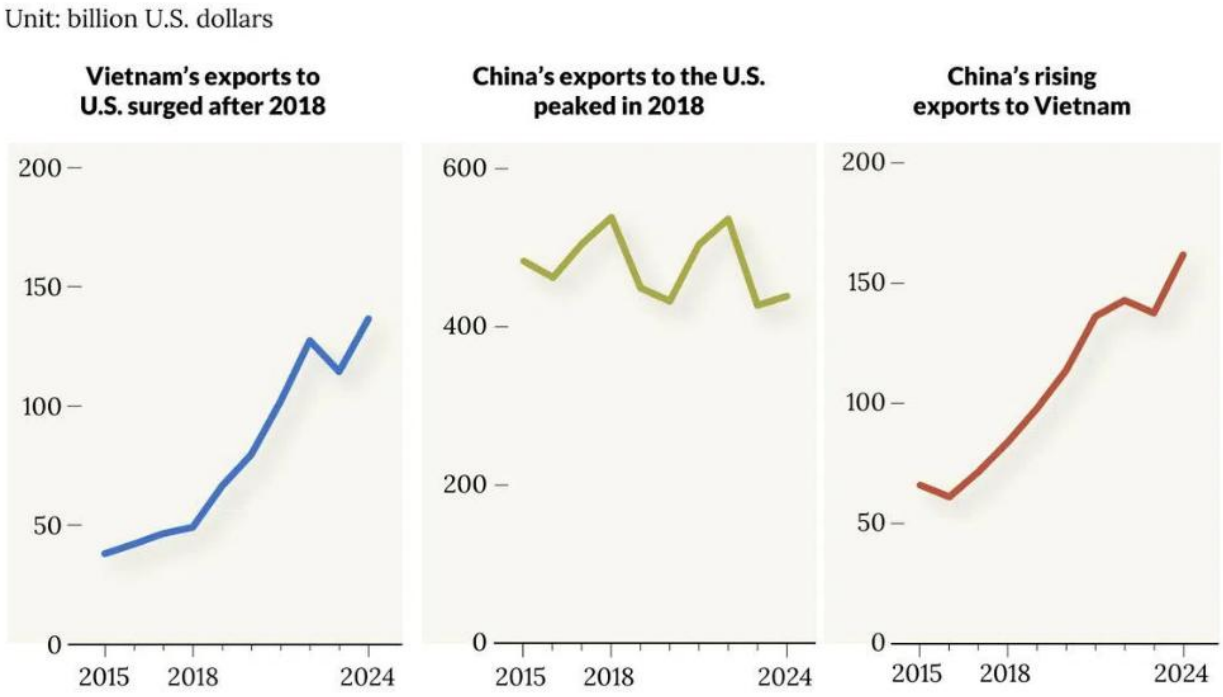

Value of greenfield Chinese manufacturing FDI in ASEAN, by sector 2014 - 2024

Source: Rhodium Group China Cross-Border Monitor. Note: Major transactions include investments above $5 million only. Extractive industries includes investment in the energy and minerals sectors.

Resource 2 for Question 1

Export transition for Vietnam and China 2015 - 2024

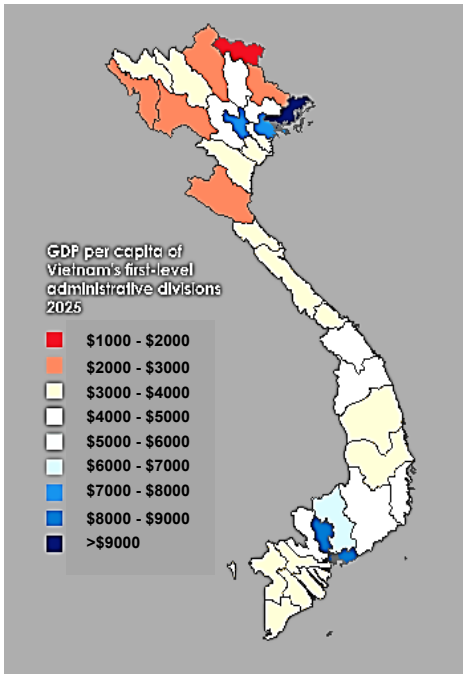

[Turn over

Resource 3 for Question 1

Flows of trade between China and Vietnam and Vietnam's GDP per capita by administrative divisions

Resource 4 for Question 1

Extract from an article on Vietnam's position in the global economy

Vietnam's position in the global economy

The US now accounts for only about a tenth of China's exports, down from roughly 18% in 2016, and in 2025 the figure fell to 7%. Vietnam has absorbed much of the redirected trade. The US now buys about 30% of Vietnam's exports, up from about 20% a decade ago. In many cases the production — and the factories themselves — has relocated to countries that retain clear access to the US market.

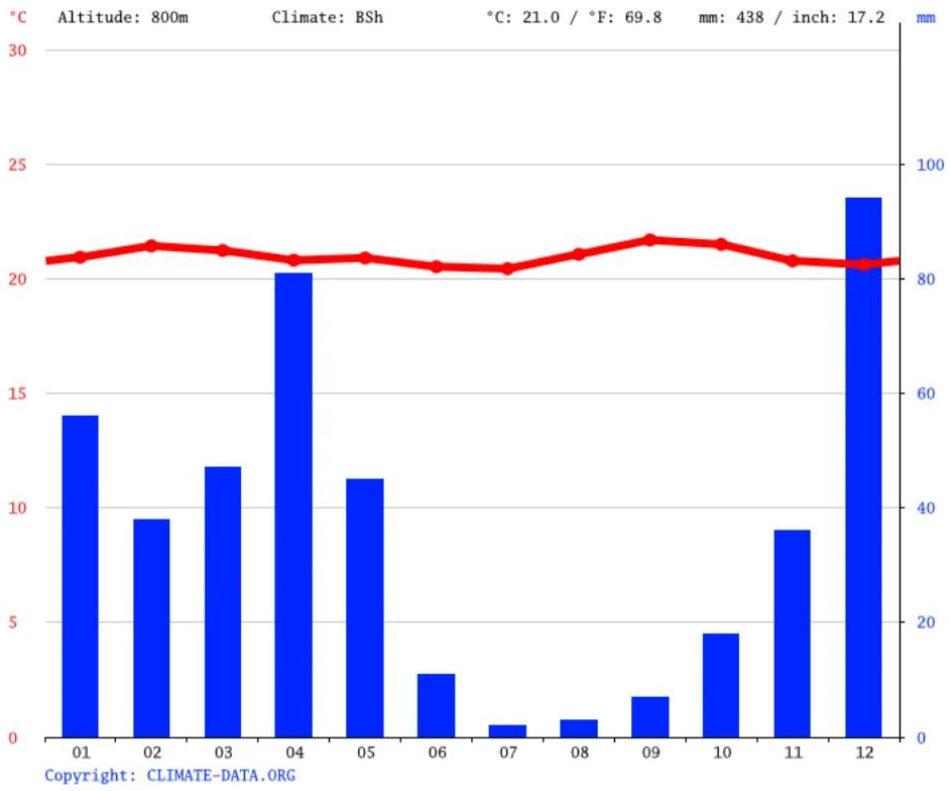

Vietnam's largest investors are Singapore, South Korea, Taiwan, and Japan, with China increasingly prominent and now among the top sources of new projects. Together, East Asian investors account for roughly 70% of Vietnam's FDI. Capital that once flowed from Hong Kong and Taiwan into Guangdong is now flowing from China and Taiwan into Vietnam, in many cases from the same firms relocating production to remain inside open markets and outside US tariffs.

Vietnam's labour force is comparatively low-cost but also relatively skilled. On the World Bank's Human Capital Index, which estimates how productive a child born today will be as an adult, Vietnam scores about 0.69. That places it second in Southeast Asia, behind only Singapore, and ahead of higher-income neighbours such as Malaysia, Thailand, the Philippines, and Indonesia.

Resource 5 for Question 2

Climograph of Bujumbura, Burundi

Resource 6 for Question 2

A mass movement in Bujumbura, Burundi

[Turn over

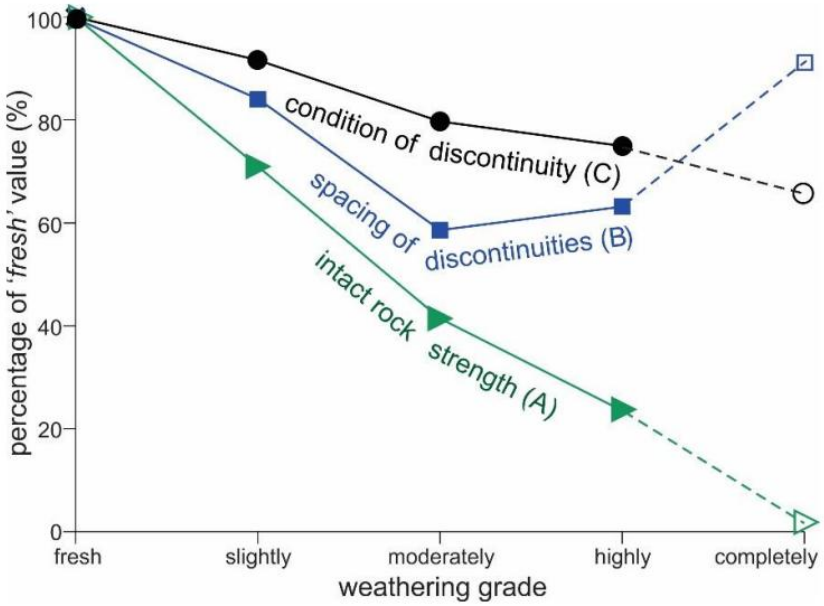

Resource 7 for Question 2

A type of mass movement in Valley of the Kings, Egypt

Resource 8 for Question 2

Influence of weathering on intact rock and rock mass properties

Condition of discontinuity *describes the physical and surface characteristics of fractures, joints, bedding planes, or faults in a rock mass.* ***Spacing of discontinuities*** *is the perpendicular distance between two adjacent fractures, joints, bedding planes, or faults within a specific rock set.*
The ***percentage of fresh value*** *is used to quantify how much a rock's original, unweathered ("fresh") property degrades as weathering advances.*
