# TAMPINES MERIDIAN JUNIOR COLLEGE

## JC2 PRELIMINARY EXAMINATION

| | |
|---|---|
| CANDIDATE NAME | |
| CIVICS GROUP | |

**H2 GEOGRAPHY** **9173/02**

Paper 2 **16 September 2024**
**3 Hours**

Additional Materials: 12 Page Answer Booklet
1 Insert

**READ THESE INSTRUCTIONS FIRST**

Write your answers in the answer booklet provided. You should follow the instructions on the front cover of the answer booklet. If you need additional answer paper, ask the invigilator for a continuation booklet.

Answer **all** questions.

The Insert contains all the Resources referred to in the questions.
You should make a reference to appropriate examples studied in the field or the classroom, even where the examples are not specifically requested by the question.
Diagrams and sketch maps should be drawn wherever they serve to illustrate an answer.
You are reminded of the need for good English and clear presentation in your answers.

The number of marks is given in the brackets [ ] at the end of each question or part question.

This document consists of **5** printed pages

Answer Questions 1 and 2 and
**EITHER** Question 3 **OR** Question 4

## Section A

## Cluster 4 Fieldwork

**1** As Singapore is faced with the problem of ageing population, a group of 8 National University of Singapore (NUS) student undertook an investigation to study the liveability of neighbourhoods in Tokyo, Japan to see liveability needs are more important for the elderly. They wish to study the environmental quality and the residents' quality of life in urban neighbourhoods, which are two aspects of urban liveability.

Environmental quality refers to characteristics of the natural and built environments. Quality of life is a measurement of a person's well-being and happiness which includes aspects such as safety and community spirit.

The students decided to conduct their investigation in two urban neighbourhoods in Tokyo -- Sugamo district (which is known to be an elderly friendly area) and San'ya district (a more impoverished area). They collected both primary and secondary data for their investigation from government reports and survey for their investigation. They formed two groups, A and B, of 4 students each.

Group A collected secondary data from official sources and learnt that Sugamo district has been redeveloped in 2005 to include flat shopping streets, ramps and safer road crossings while San'ya did not undergo any redevelopment. They came up with this hypothesis:

Hypothesis of Group A: Sugamo has better environmental quality and its residents have a higher quality of life than the residents of San'ya.

Group B referred to a Tokyo University research article that states that although San'ya is an impoverished area, there is strong community spirit and the cost of living there is the lowest in Tokyo. They came up with this hypothesis:

Hypothesis of Group B: Sugamo has better environmental quality, but its residents have a lower quality of life than the residents of San'ya.

The students went on to collect primary data on the environmental characteristics and residents' perception of quality of life in these neighbourhoods. The students allocated one week for field investigation. They walked around both neighbourhoods to collect primary data from the residents and aimed to find 25 elderly respondent at each site. They also conducted an environmental study by themselves and also took photos of the elderly in the area.

Resource 1 shows the photos taken by the students of Sugamo and San'ya.
Resource 2 is the environmental survey form used by the students.
Resource 3 shows the students' and residents' perception of environmental quality in Sugamo and San'ya.
Resource 4 shows the residents' perception of quality of life in Sugamo and San'ya.

**1** **(a)** Explain how the students can minimise potential risks they might encounter when conducting their fieldwork in the two neighbourhoods shown in Resource 1. [5]

**(b)** Using Resource 1, explain how students can minimise potential ethical issues faced when conducting their fieldwork in both neighbourhoods. [4]

**(c)** Describe an appropriate sampling method for the students to collect residents' response on the residents' perception of quality of life in Sugamo and Sanya. [6]

**(d)** With reference to Resource 2, explain why the environmental survey results differ between the residents and the students in Resource 3. [4]

**(e)** Sketch a suitable representation of the students' results for Sugamo and San'ya from Resource 3. [5]

**(f)** Suggest three potential limitations arising from the survey results from the residents' perception of quality of life in Sugamo and San'ya. [6]

**(g)** Evaluate the usefulness of Resources 1, 3 and 4 in helping students understand factors affecting liveability for the elderly in Sugamo and San'ya and suggest which hypothesis should be accepted. [10]

## Section B

### Cluster 3 Sustainable Future and Climate Change

**2** Resource 5 shows the population growth of the world's 8 largest cities.
Resource 6 shows the changes in Marina Bay Area, Singapore.
Resource 7 shows the liveability city ranking for selected cities.

**(a)** Using Resource 5, describe the change in urban population growth for the world's 8 largest cities from 1950 to 2035 [4]

**(b)** With reference to Resource 5, explain the forecasted UN Projection of the world's 8 largest cities in 2035. [6]

**(c)** Using Resource 6, describe the changes shown in the Marina Bay area. [4]

**(d)** Explain the economic reasons for cities to engage in urban reimaging efforts. [6]

**(e)** Using Resource 7, describe the change in liveability ranking for selected cities from 2013 to 2023. [4]

**(f)** Explain the factors that could have led to a change in the liveability rankings for the cities shown in Resource 7. [6]

## Section C

**Answer EITHER question 3 OR question 4**

**3** Evaluate the extent to which we can measure Sustainable Urban Development.

[20]

**4** Evaluate the challenges in implementing strategies to respond to climate change.

[20]

**[End of Paper]**
