TAMPINES MERIDIAN JUNIOR COLLEGE
JC2 PRELIMINARY EXAMINATION

CANDIDATE NAME

CIVICS GROUP

H1 GEOGRAPHY **8834/01**

Paper 1 **2 September 2025**
3 hours

Additional materials: 12 Page Answer Booklet
1 Insert

READ THESE INSTRUCTIONS FIRST

Write your answers in the answer booklet provided. You should follow the instructions on the front cover of the answer booklet. If you need additional answer paper ask the invigilator for a continuation booklet.

Answer **Question 1** in **Section A.**

Answer **both** questions in **Section B.**

Answer **two** questions in **Section C.**

The Insert contains all the Resources referred to in the questions.
You should make a reference to appropriate examples studied in the field or the classroom, even where the examples are not specifically requested by the question.
Diagrams and sketch maps should be drawn wherever they serve to illustrate an answer.
You are reminded of the need for good English and clear presentation in your answers.

The number of marks is given in the brackets [ ] at the end of each question or part question.

This document consists of **5** printed pages and 1 blank page.

Section A

Answer **all** questions in this section.

Cluster 2 Fieldwork

1 As part of a Geographical Investigation assignment, a group of 6 18-year-old Geography students carried out an investigation during their June holidays to look into the needs of the elderly living in the neighbourhood of Bedok.

The hypothesis of their investigation was:

"The social needs of the elderly are adequately addressed by the amenities in the Bedok neighbourhood."

As part of their secondary research, the students found out that residents above 65 make up 25% of the local population of the Bedok neighbourhood. Of the elderly population, they also found out that 46% were male and 54% were female.

The students designed a survey questionnaire and carried out the survey on two days between 9 am and 12 pm. For both days, they split themselves into 3 groups to conduct the survey. For the first day, they visited the Bedok Interchange Hawker Centre and approached elderly persons who were in the hawker centre. At first, they tried approaching those who were browsing the food stalls but faced some difficulty conducting the survey. As such they chose to approach elderly persons who were having their meal or those in a queue. On the second day, they stood outside Heartbeat @ Bedok and approached elderly persons who were passing by. In the span of 2 days, they managed to survey a total of 60 elderly persons.

Resource 1 shows a map of Bedok neighbourhood and the two locations where the surveys were conducted.
Resource 2 shows the questionnaire the students used for their survey.
Resource 3 shows selected results of the survey.

(a) Explain whether the students' hypothesis is suitable. [3]

(b) Suggest how the students could minimise **two** potential risks arising from undertaking the fieldwork in the locations shown in Resource 1. [4]

(c) Suggest possible issues related to research ethics for this investigation. [4]

(d) Explain the strength(s) and limitation(s) of the survey questionnaire seen in Resource 2. [6]

(e) With reference to Resource 3, explain how the data representation can be improved. [3]

(f) The students concluded that the social needs of the elderly were adequately addressed by the amenities in the Bedok Neighbourhood.
Evaluate the validity of their conclusion. [10]

Section B

Answer **both** questions from this section.

Cluster 1 Sustainable Future and Climate Change

2 Resource 4 shows the global ecological footprint distribution.
Resource 5 shows urbanisation trends until 2030.

(a) Define what is meant by the Ecological Footprint. [3]

(b) With reference to Resource 4, describe the global ecological footprint distribution. [3]

(c) With reference to Resource 4 and your own knowledge, explain why ecological footprint distribution differs globally. [6]

(d) With reference to Resource 5, account for the urbanisation trends until 2030. [4]

(e) Explain how the observed trends in Resource 5 can hinder the achievement of sustainable urban development. [6]

3 Resource 6 shows the projected changes in mean annual precipitation between 1981-2000 and 2081-2100 for Australia presented by two climate models, the Australian CSIRO-Mk3 6.0 model and the Chinese FGOALS G2 model.

Resource 7 shows the consumption-based carbon emissions per capita of selected countries. Consumption-based emissions are national emissions that have been adjusted for trade. They are calculated as domestic (or 'production-based' emissions) emissions minus the emissions generated in the production of goods and services that are exported to other countries or regions, plus emissions from the production of goods and services that are imported.

(a) Compare the projected changes in precipitation between the Australian CSIRO-Mk3 6.0 model and the Chinese FGOALS G2 model shown in Resource 6. [4]

(b) Suggest possible reasons for the variations in future impacts of contemporary climate change such as those shown in Resource 6. [5]

(c) Explain some impacts the precipitation changes projected by the CSIRO-Mk3 6.0 model may have on the terrestrial ecosystem of Australia. [4]

(d) Describe the relationship between consumption-based carbon emissions and GDP per capita shown in Resource 7. [3]

(e) Explain how natural factors could have led to temperature variations in the Quaternary Period. [6]

Section C

Answer **two** questions from this section.

4 '"The strategies used to manage non-hazardous solid waste in cities are largely effective." Evaluate the statement in relation to cities in countries at various levels of development. [13]

5 Evaluate the effectiveness of strategies used to address the issues faced by women living in cities. [13]

6 Evaluate strategies used to adapt to effects of climate change. [13]
