# JURONG PIONEER JUNIOR COLLEGE

## JC2 Preliminary Examination 2026

**GEOGRAPHY** **8834/01**

**Higher 1** **31 August 2026**

Paper 1 **3 hours**

INSERT

**READ THESE INSTRUCTIONS FIRST**

This insert contains all the Resources referred to in the questions.

This document consists of **8** printed pages.

**[Turn over**

Commented [NAMA(1]: Make it consistent. If don't have blank page, can just remove this part (like H2 Paper 2). Or if you decide to put 2 blank pages like H2 Paper 1)

Commented [MOBR(2R1]: We decided to leave out the blank page as 8 pages suited the booklet format just right.

**Resource 1A for Question 1**

**Map showing the locations of the 3 return points in Bukit Panjang**

**Resource 1B for Question 1**

**Photographs showing the 3 return points in Bukit Panjang, Singapore**

**Return Point X** - Bukit Panjang Hawker Centre and Market

**Return Point Y**- Fairprice supermarket outlet at Saujana Road

**Return Point Z** - HDB void deck at Senja Road

**Resource 2 for Question 1**

**Data collected at each of the 3 return points**

| Time | Return Point X | | Return Point Y | | Return Point Z | |
|---|---|---|---|---|---|---|
| | Number of youths participants | Total number of people | Number of youths participants | Total number of people | Number of youths participants | Total number of people |
| 8 am – 11 am | 18 | 36 | 7 | 28 | 10 | 24 |

**[Turn over**

**Resource 3 for Question 1**

**Questionnaire**

Hi, we are students from a junior college in Singapore. As part of our school project, we are investigating the use of Beverage Container Return Scheme, also known as Return Right, amongst different age groups. We would appreciate it if you could take some time to fill in the survey.

| **Gender** | **Age** | **Are you a Bukit Panjang resident?** | **What is your education level?** |
|---|---|---|---|
| ○ Male<br>○ Female | ○ 0 – 7 years<br>○ 10 – 16 years<br>○ 20 – 25 years<br>○ Above 25 years | ○ Yes<br>○ No | ○ Secondary<br>○ ITE / Polytechnic / Junior College |

**Q1. Which age group do you think is more likely to use the Return Points?**

- ○ 0 – 7 years
- ○ 10 – 16 years
- ○ 20 – 25 years
- ○ Above 25 years

**Q2. What do you usually do with empty plastic bottles or metal cans after drinking?**
*(Select all that apply)*

- ○ Return them at a Return Right machine
- ○ Put them into a blue recycling bin
- ○ Throw them into a general waste bin
- ○ Keep them to return later
- ○ Give them to someone else to return
- ○ Others: _____

**Q3. Have you ever returned an eligible beverage container at a Return Right machine?**

- ○ Yes, regularly
- ○ Yes, occasionally
- ○ No, but I am interested
- ○ No, and I am not interested

**Q4. If you have returned beverage containers, what are your main reasons?**
*(Select all that apply)*

- ○ To get back the 10-cent deposit
- ○ To reduce waste
- ○ To support recycling
- ○ To keep the neighbourhood clean
- ○ Influenced by school, friends or social media
- ○ The machine is convenient to use
- ○ Others: _____

**Q5. What would encourage you to return beverage containers more often?**
*(Select all that apply)*

- ○ More awareness or education campaigns
- ○ More Return Right machines near my home or school
- ○ Clearer instructions on how to use the machines
- ○ Larger incentives or rewards
- ○ Peer influence / Social media trends
- ○ School or community recycling challenges
- ○ Others: _____

**Resource 8 for Question 3**

**Article on the impacts of climate change on aquatic ecosystems**

Rising global temperatures have led to significant changes in aquatic ecosystems around the world, particularly in the oceans. One major consequence is the warming of ocean waters, which has increased the frequency and intensity of marine heatwaves. These heatwaves have contributed to widespread coral bleaching and the degradation of coral reefs that provide habitats and breeding grounds for many fish species.

Contemporary climate change is also affecting ocean chemistry through increasing ocean acidification. Higher concentrations of carbon dioxide in the atmosphere are absorbed by seawater, making oceans more acidic. This reduces the ability of shell-forming marine organisms, such as molluscs and certain plankton species, to build and maintain their shells. As these organisms become less abundant, marine food chains may become disrupted and biodiversity may decline.

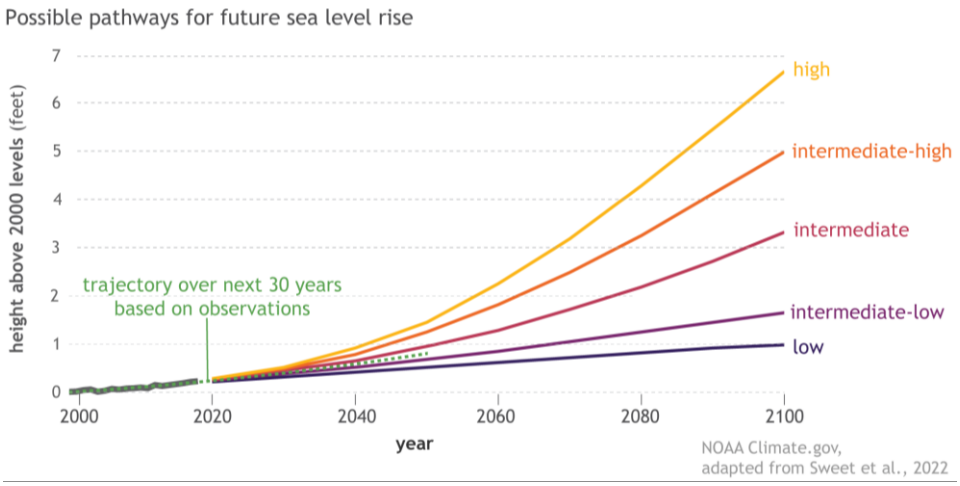

In addition, changes in ocean temperatures and circulation patterns can affect the availability of nutrients and plankton, which serve as important food sources for fish. As coral reefs deteriorate, they also become less effective at reducing wave energy, making coastlines more exposed to wave action and storm surges. Together, these changes alter habitats, food availability and the condition of coastal environments.
